FWPA 2014–19 STRATEGIC PLAN

The revised 5-year strategic plan was approved by the FWPA Board in June 2014. Essentially, it is an extension of the preceding 2013-18 Strategic Plan, the main points of which are demonstrated by the activities highlighted on these pages.

GOVERNMENT LEGISLATION INCREASES POTENTIAL FUNDS

Amendments to the Forestry Marketing and Research and Development Services Act 2007 allow voluntary payments for industry to receive matching funds for eligible activities. This provides industry with the opportunity to access increased government funds for projects it is prepared to support.

NEW CRC FRAMEWORK DEVELOPED

A proposal for a new cooperative research centre – the CRC for Transforming Woodfibres – was developed. The concept was well received during discussions with industry and will be further pursued.

WOOD MESSAGING REACHES MORE CONSUMERS THROUGH TV

The Planet Ark/Environmental Edge, Wood. Naturally Better.™ television commercial nearly doubled awareness. Television remains the most efficient medium to deliver a message to a broad national audience.

CONSUMER RESEARCH FINDINGS CONFIRM COMMUNICATIONS EFFECTIVENESS

The eleventh consumer research study showed a continued growth in positive results, with perceptions of wood trending upwards on major indicators. This is not the case for most other materials.

PLANET ARK MAKE IT WOOD ACTIVITY CONTINUES

Engagement with local councils, outdoor advertising, newsletters, event participation and more continues to build the relationship with Planet Ark and communicate the environmental benefits of wood.

SPECIFIER RESEARCH SHOWS WOODSOLUTIONS AWARENESS CLIMBS

Awareness of the WoodSolutions program among its prime target audience has more than doubled since May 2011. This is matched by increased use of the website, which demonstrates the effectiveness of the program in delivering information to this influential group.

WOODSOLUTIONS WEBSITE TRAFFIC INCREASES

More than 450,000 site visitors, an increase of 35% on the previous year, accessed design and building information, performance data and downloadable Technical Design Guides and other resources.

Highlights continued on next page
ONLINE BUSHFIRE CALCULATOR LAUNCHED

This new tool allows users to estimate the bushfire attack level (BAL) of a particular building site and see how changing input values affects the BAL rating. The BAL rating can be a major influencing factor in the choice of building materials.

FORESTLEARNING EXPANDED

A greater range of teaching resources are now available on the ForestLearning website, which allows teachers to integrate information about forests and timber production into their lesson plans.

SOLID WOOD INNOVATIONS INVESTMENT EXTENDED

Following the successful conclusion to the first stage of the project, the SWI investment has been confirmed for another two years to continue further product research and development.

PROJECT REPORT: DUE DILIGENCE SYSTEM DEVELOPED FOR IMPORTERS

The Australian Industry Timber Due Diligence (AITDD) system helps ensure timber imports are legally sourced by providing an easy-to-use checklist and assessment tools.

PROJECT REPORT: FASTER ASSESSMENT OF PRESERVATIVE LEVELS IN TREATED TIMBER

Near infrared (NIR) spectroscopy provides a cheap and accurate way of measuring the preservative content in H2F treated timber.

BUILDING STRONGER VALUE CHAINS SEMINAR

An industry event that brought together senior personnel from companies along the value chain, was attended by more than 130 delegates, 83% of whom rated it as very good or better.

NEW STATISTICAL DASHBOARD LAUNCHED IN JUNE 2014

Accessible through the FWPA website, this new facility provides industry members with access to key timber sector economic statistics, aggregated from a range of sources.

STATISTICS AGGREGATION SYSTEM DEVELOPED AND LAUNCHED

This innovative tool allows industry members to anonymously contribute information, which is then aggregated so that they can benchmark their performance against other participating businesses.

CHANGES TO THE BUILDING CODE OF AUSTRALIA INCREASE OPPORTUNITIES FOR WOOD FRAMING

Continuing the FWPA strategy of removing impediments to the use of timber, changes to the BCA now mean that timber-framed 3-storey construction for hotels and motels (i.e. class 3 buildings) is now permissible.
CHAIRMAN’S REPORT

As I have said many times, FWPA is a vehicle for industry collaboration and it exists for this purpose. The industry has other vehicles for collaboration such as associations, other service companies (e.g., ForestWorks, Southern Tree Breeders Association), research organisations, and formal and informal joint ventures.

The challenge for industry executives in relation to collaboration can be viewed as a three stage decision process. First, can collaboration achieve a better outcome than competition? Two, who are the partners and what is the best vehicle for the collaboration? Finally, what is the best mechanism for funding and resourcing the proposed collaborative activity?

Collaboration is not an objective in its own right. Rather, it is a tool for achieving a desired outcome. Like other rural research and development corporations (RDCs), FWPA was established to address market failures, particularly in the area of research, development and extension (RD&E) and market development. The definition of market failure relates to the production of public goods where there is a potential for free riders.

In exchange for addressing these market failures, the Commonwealth of Australia provides FWPA with access to the compulsory levies and matching payments for eligible activities. This relationship is codified through the 5-year Statutory Funding Agreement.

As a consequence, FWPA is a vehicle for collaboration backed by the authority of government. This is a privileged position that the company does not take for granted. For this reason, the company invests considerable effort and resources in consultation and communication with members, levy payers and governments to ensure that its programs address clear market failures and benefit the largest proportion of all stakeholders.

FWPA is totally dependent on stakeholder support for its ongoing existence. Therefore, it is reassuring that the company was ranked as the most influential organisation in the sector from a perception survey of 253 respondents who were mostly middle to senior managers.
I would like to acknowledge the significant contribution that the Australian Government continues to make to FWPA. In December 2013, the Australian Government passed legislation in relation to the RDCs that made a number of changes to improve transparency and accountability of corporate governance, improve coordination in line with the National Primary Industries RD&E Framework, and improve effectiveness and efficiency of the RDC model. The Board of FWPA welcomed these changes.

The legislation resulted in specific amendments to the *Forestry Marketing and Research and Development Services Act 2007*, which is the enabling legislation that allows FWPA to access the compulsory levies and matching payments provided by the Australian Government. These amendments will allow FWPA to claim matching payments for voluntary contributions once the relevant regulations are enacted.

It is anticipated that the capacity to secure matching payments for voluntary contributions will lead to additional collaborative R&D investment in the sector. Importantly, voluntary contributions can help build support for the range of expanded FWPA activities that were explored in the 2012 Comprehensive Business Case.

I would like to take this opportunity to thank all my fellow directors for their commitment and contribution in their diligent oversight of the Company as it refocused its activities over the 2013/14 financial year. I would especially acknowledge the service of Dr Michele Allan, who retired from the Board in October 2013, and Vince Erasmus, who has decided not to re-stand for election this year.

I also thank the management of FWPA, members of our advisory groups, our research providers and marketing suppliers.
**MANAGING DIRECTOR’S REPORT**

FWPA is a relatively small organisation. By way of comparison, the company’s expenditure is only a fraction of the larger rural research and development corporations (RDCs). For example, Horticulture Australia Limited is 10 to 12 times bigger while Meat Livestock Australia Limited is at least 20 times bigger than FWPA.

Of course, bigger is not necessarily better. There are distinct advantages in being small, such as a requirement for focus, reduced bureaucracy and speed of implementation. A smaller organisation also needs to be more creative and more collaborative to get more bang for its bucks.

Hopefully, FWPA exemplifies all these positive attributes of a small, effective organisation.

It all starts with our vision and mission. These are not abstract statements that are only dusted off at annual report time. Rather, they provide focus to our programs and investments and are the yardstick by which we measure progress.

**Vision:**

That forest and wood products are the preferred, sustainable material that meets Australian market needs.

**Mission:**

To work with stakeholders to identify and deliver collaborative programs that improve the competitiveness, market and community acceptance of forest and wood products.

To paraphrase, we are focused on supporting the market for wood products and we will work collaboratively to achieve this outcome.

This vision and mission also makes a lot of sense when you consider our four major stakeholder groups: forest growers, wood processors, importers and the Australian Government. For the first three groups, the benefit of supporting the market for wood products is self-evident. For the Australian Government, the benefits include the carbon storage benefits of wood products and forests, and alignment with the national rural research priorities and the national strategic research priorities.

In terms of measuring success, we have good data regarding the perceptions of consumers and building specifiers. Unfortunately, despite several attempts, we have not yet been able to quantify market shares of wood versus other materials, although this remains a priority for the statistics and economics program.

It would be easy to assume that FWPA’s vision and mission is just about generic marketing or market development. This would be a mistake. The five programs all contribute equally to the organisation’s goal but they each have a different pathway and timeline for implementation.

For example, the timber standards and building codes program is fundamentally about improving the way wood products are used and this will have an impact on the costs of manufacture and market acceptance.

The statistics and economics program is about improving the accuracy and timeliness of information for decision makers. Better information will help reduce risk and hopefully lead to improved investor confidence, which, in turn, will lead to improved competitiveness and products and processes that are better aligned to current and future market needs.

FWPA is focused on the building blocks that will deliver on our corporate mission. Over the last 12 months, we have achieved the following important platforms that can be utilised by our stakeholders:

- Secured changes in the Building Code of Australia for 3-storey construction for hotels and motels (i.e. class 3 buildings)
- Developed the conceptual framework for a new cooperative research centre (i.e. CRC for Transforming Woodfibres)
- Launched the statistics data portal and expanded the statistics aggregation service
- Expanded the WoodSolutions program and our partnerships with building specifiers
- Expanded the teaching resources available on the Forestlearning website
- Improved community understanding of the environmental credentials of wood products through our partnership with Planet Ark and the Wood. Naturally Better.™ TV advertising.
Recently, the decline in institutional research capacity has been put firmly on the agenda and it has gained national and international attention. Australia once had world class research capacity in forest and wood products but this has been effectively dismantled over the last 10 years.

FWPA does not have the funds or the mandate to solve this problem. Again, by way of comparison, FWPA's current budget is about 25% of what CSIRO was spending on forest sector research 12 years ago or about the same size as the R&D budget of a large State forest agency.

I was recently asked if I had the “solution” for putting the forest and wood products sector onto a growth path. Of course, the answer was no. The forest and wood products sector is far too diverse in products, markets and geography for there to be a single problem, let alone a uniform solution.

However, the one theme that underpins much of the discussion about the current situation and future opportunities for the sector is investor confidence. While investor confidence is very much about the future, it is also haunted by the past and many investors have been previously burnt by the sector.

Building investor confidence will take time and some changes in the macro-economic settings for the sector. One thing is for sure: we all want to be in a growing industry rather than one in decline.

There is no doubt that the achievement of FWPA’s vision will have a direct impact on investor sentiment.
Industry services company

Forest and Wood Products Australia (FWPA) Limited is the industry-owned services company that:

› Invests in outcome-oriented research and development and encourages the adoption of R&D findings (RD&E)
› Manages the generic promotion of the forest and wood products sector
› Plays a role in education and industry skills and capacity
› Coordinates the sector’s approach to timber standards and building codes
› Coordinates the collection and analysis of reporting of industry statistics and economic measures.

FWPA is responsible to its members and levy payers, and to the Australian Government through a Statutory Funding Agreement (SFA) that allows for Commonwealth matching of appropriate expenditure on RD&E and other eligible activities.

The 2013/14 Annual Report provides a summary of the company’s operations over the past 12 months, the company’s financial position and its statutory and contractual reporting requirements.

VISION

To ensure that forest and wood products are the preferred, sustainable material that meets the Australian market needs.

MISSION

To work with stakeholders to identify and deliver collaborative programs that improve the competitiveness, and market and community acceptance, of forest and wood products.
ACCOUNTABILITY TO STAKEHOLDERS

The Board and management of FWPA are committed to delivering outcomes to stakeholders through strong corporate governance and efficient and transparent company operations. To this end, each program has a strategic focus and performance measures that are outlined within the five-year strategic plan, annual operating plan and other key planning documents (e.g. R&D investment plans). The corporate plans are developed in close consultation and ongoing dialogue with key stakeholders and are regularly reviewed by the Board. The planning documents are publicly available on the corporate website and communicated directly to company members and other stakeholders through a range of communication channels.

CORPORATE GOVERNANCE

Under the company constitution, FWPA’s Board has between five and nine directors, including the managing director, at least two of whom are Non-Member directors. The Board currently has seven directors.

FWPA management is accountable to the Board and aims to provide accurate, timely and meaningful information to the Board, as well as to key stakeholders. All key company functions are undertaken by FWPA staff, although additional resources may be contracted on an ‘as needed’ basis.

The Board oversees and determines policies consistent with the Strategic Plan and emerging industry needs. It has direction over resources and the way in which strategies are implemented in accordance with the Company’s delegation authority.

The Board is expected to meet at least four times during the year. At least one meeting is in a regional location that is important to the forest and wood products industry.

During 2013/14, the Board’s activities included:

› Initiating a director selection process leading to the election of two directors by FWPA members in October 2013
› Presenting proposed amendments to the company’s Constitution to align with the new Statutory Funding Agreement (SFA) and improve management of the member register
› Overseeing the implementation of FWPA responses to the initiatives identified in the Government’s Rural R&D Policy Statement released in July 2012.

The Board has also instituted a remuneration and human resources committee made up of three non-executive directors. Secretariat support to the committee is provided by an external HR consultant. The committee is responsible for the company’s remuneration policy, including suitable benchmarking measures for the managing director and the MD’s direct reports.

Independent review

An independent review of FWPA’s corporate performance, conducted in January 2012 by SED Consulting, concluded that the company is well run and has met all of its obligations.

The review was commissioned as part of FWPA’s obligations under its five-year SFA with the Australian Government. The SFA requires a review to be undertaken by an independent consulting group that has not previously worked for FWPA.

The consultants, who are very familiar with the rural research and development sector, found FWPA to be well run and that it had met all of the obligations under the Statutory Funding Agreement with the Government during the review period.

Read the full document here
The 2014 – 19 Strategic Plan

The revised five-year Strategic Plan was approved by the FWPA Board in June 2014 and published on the FWPA website. Copies were also sent to members and key stakeholders.

The Strategic Plan incorporates the investment priorities determined by consultation with members and key stakeholders to identify priority activities for R&D investments, generic marketing and standards coordination, and the statistics and economics program.

Developed in consultation with both the industry and the Australian Government, the Strategic Plan defines seven drivers that will most influence the future success of the industry. The drivers provide direction to the FWPA Board as it fulfils its responsibilities to the industry.

The Strategic Plan incorporates a strategic analysis of FWPA and its operating environments, which is summarised in the table on the following page.

These issues are addressed in the Strategic Plan and operational strategies, objectives and measures of success defined under each of the five programs.

The plan complies with the requirements of the five-year Statutory Funding Agreement (SFA) with the Australian Government, which ends in September 2017.

Read the SFA here

Read the 2014-2019 Strategic Plan here
### Drivers of Change

- Consistent and predictable revenue stream and confidence to make long-term commitments
- Government has endorsed RDC model
- Strong corporate governance
- Industry services and R&D role provides credibility to external stakeholders
- Good networks within industry
- Co-investment and collaborative business model
- Good relationship between Board and management
- Strong strategic planning process and priority setting
- Whole-of-industry approach (except pulp and paper)
- Expanding capacity for information dissemination
- Benefit-cost analyses demonstrate high return on investment

### Potential to increased levy revenue (matching payments from 0.2% to 0.5% of GVP)

### Ability to get Government matching for voluntary contributions for R&D following legislative changes

### Stronger partnerships with building specifiers

### Greater adoption and use of research outputs

### Demonstrate the benefits from collaboration innovation and increase industry support

### Plantation volumes increasing revenue in short term

### Increasing linkages between researchers and industry

### Developing cooperative R&D partnerships within Australia and internationally

### Engagement with key stakeholders and industry associations

### Capacity/capability of research providers is declining

### Skills base in industry/demographics changing

### Reduction in forest plantation estate

### Low industry financial returns

### Lack of appreciation of R&D and innovation in industry

### Industry's social licence to operate under threat

### No or low growth in productivity of forest resources and processing

### International ownership of industry may reduce domestic investment in R&D and collaboration
THE INDUSTRY AT A GLANCE

The forest and wood products industry’s extensive value chain ranges from forests with their inherent environmental services through to wood processing, product development, consumer use, reuse, recycling and disposal. The diverse properties of forest and wood products enable them to be used in a huge array of product types and applications, and to provide a range of functional benefits.

In the next decade and beyond, the forest and wood products sector – which grows, harvests, processes, imports and markets wood and wood fibre products – has the potential to increase its already substantial contribution to Australia’s economy and environmental sustainability. The sector also has opportunities to develop new tree crops for carbon sequestration, energy and other applications, and new engineered timber building systems to increase construction sector volumes.

The industry makes a significant contribution to the Australian economy:

Source: State of the Forests Report 2013
Financial summary

In 2013/14, FWPA had revenue of $8.2 million. The company’s revenue is derived from a levy contribution from industry and matched funding from the Australian Government. The industry’s financial contribution is a fixed levy rate based on each company’s volume of activity for each of the industry sectors. In addition, FWPA receives monies collected under the Primary Industries (Customs) Charges Act 1999 from imported timber products. The rate varies, dependent on the product type and related Ministerial determination. The Government’s contribution matches the industry’s levy contributions where these are invested specifically in R&D activity, up to a maximum of 0.5% of the industry’s gross value of production. The breakdown by source of revenue is shown below and opposite:

In previous years, and in response to stakeholder support, FWPA funded a number of new initiatives from its cash reserves as a means of commencing pilot programs and demonstrating the benefits of collaborative programs. With the current cash reserves now approaching the company’s prudential limits, the company has increased its expenditure by 2% to $7.7 million and ensuring adequate cash reserves.

Statutory Funding Agreement

FWPA is one of 15 Australian rural research and development corporations (RDCs) and is the nominated industry-owned service company under the Forestry Research and Development and Marketing Act 2007. FWPA access to the levies and matching payments from the Australian Government, and the associated obligations, is specified through a Statutory Funding Agreement (SFA).

Amendments to the Act

In December 2013 the Australian Government legislated amendments to the Forestry Marketing and Research and Development Services Act 2007, which is the enabling legislation that allows FWPA to access the compulsory levies and matching Government payments. These amendments will allow FWPA to claim matching payments for voluntary contributions once the relevant regulations are enacted.

It is anticipated that the capacity to secure matching payments for voluntary contributions will lead to additional collaborative R&D investment in the sector. Importantly, voluntary contributions can help build support for the range of expanded FWPA activities that were explored in the 2012 Comprehensive Business Case.

Aligning with national priorities

The Australian Government is a major contributor to FWPA programs through matching R&D funding. The Annual Operating Plan demonstrated how the Company’s investment priorities aligned with the Australian Government’s new Strategic Research Priorities announced in June 2013.

These priorities include:
› Enhancing the sustainability and efficiency of production systems
› Improving competitiveness through a whole-of-industry approach
› Maintaining and extending markets for wood products
› Responding to climate change and creating an innovative culture.

The 2014-19, five-year Strategic Plan provides the strategic context in terms of drivers, programs, outputs and outcomes that are included in this report.

In 2013/14, the Australian Government provided $2.9 million to FWPA programs through matching funding. The funding increased 7.4% compared to the previous year.

The Company’s RD&E investment priorities align with the Australian Government’s strategic and rural research priorities and their associated community and industry outcomes.

View the Rural Research and Development Policy Statement here

Rural Research & Development Priorities

The percentage of R&D expenditure across rural R&D priorities 2013/14

- Productivity and adding value 37%
- Supply chain and markets 24%
- Natural resource management 20%
- Climate variability and climate change 18%
- Biosecurity 1%

Strategic Research Priorities

The percentage of R&D expenditure estimates across Strategic Research Priority Goals 2013/14

- Living in a changing environment 14%
- Managing our food and water assets 46%
- Promoting population health and wellbeing 4%
- Lifting productivity and economic growth 30%
- Other 6%
The Board

FWPA's Constitution allows between five and nine directors, including the managing director, who is appointed by the Board. At least two of the Board's non-executive directors must be classified as Independent directors, which means they do not hold a position within an FWPA member company. One-third of FWPA's directors are elected each year at the annual general meeting (AGM).

During the reporting period, there were eight directors on the Board, including the managing director. At the 2013 AGM, two directors, Michele Allan and Ron Adams completed their three-year terms. At that meeting, Ron Adams and Craig Taylor were elected to the Board.

CHAIRMAN AND NON-EXECUTIVE DIRECTOR
Mr Ron Adams

Managing Director of Wespine Industries Pty Ltd, Mr Adams is also President of Forest Industries Federation of WA and a Trustee of J.W. Gottstein Memorial Trust. He was formerly a Director of the National Association of Forest Industries (NAFI) and a member of the WA Minister for Forestry’s Timber Plantation Advisory Group and The Australian Plantation Products and Paper Industry Council (A3P). He holds an associateship in Mechanical Engineering, is a graduate of the Harvard Business School International Advanced Management Programme and a Foundation Fellow of the Australian Institute of Company Directors.

Board responsibilities: Chair of the Remuneration and HR Committee.

DEPUTY CHAIRMAN AND NON-EXECUTIVE DIRECTOR
Mr John Simon

John Simon is CEO of Simmonds Lumber Group and has more than 25 years’ experience in the Australian wood products sector. After completing his master's in timber engineering, Mr Simon worked in timber research at the Council for Scientific and Industrial Research (CSIR) in South Africa. Since arriving in Australia 28 years ago, he has been the Managing Director of Sterlands, the largest timber frame and truss producer in Australia; CEO of national timber distributor Pine Solutions; Managing Director of merchant and retailer Hudson Building Supplies; and Chairman of the Timber Development Association for 10 years. Currently he is a Director of the Australian Timber Importers Federation, Director of the Timber Development Association and is a member of the Housing Industry Association’s Manufacturers and Suppliers Council. He is also a Fellow of the Australian Institute of Company Directors.

Board responsibilities: Member of Remuneration and HR Committee, and Chair of the Market Access and Development Advisory Group.

NON-EXECUTIVE DIRECTOR
Mr John McNamara

John McNamara is CEO of Parkside Group Milling and currently holds a number of directorships. Since beginning his career as a mechanical engineering cadet for BHP in Wollongong, Mr McNamara has accrued more than 30 years experience in the forest and forest products industry, including time spent in Tasmania and in Mount Gambier as General Manager of Auspine’s Group sawmilling and wholesale distribution business. Mr McNamara is currently the CEO of Parkside Group Sawmilling businesses which specializes in Native Hardwood sawmilling and value add processing in Queensland. Previously, Mr McNamara was the Managing Director of Hyne Timber, a role he held for 18 years.

Board responsibilities: Chair of the Audit and Finance Committee and Member of Remuneration and HR Committee (from 15 May 2014).
NON-EXECUTIVE DIRECTOR

Mr Evan Rolley

Mr Rolley was previously the Chief Commissioner for Forests, then Managing Director of Forestry Tasmania and, more recently, Secretary of Premier and Cabinet in Tasmania. He is currently Executive Director of Ta Ann Tasmania and a Director of Tasports, and operates a successful farming business, Huon Valley Vineyards. He holds qualifications in forestry and economics.

Board responsibilities: Chair of the Sustainability and Resources Advisory Group.

NON-EXECUTIVE DIRECTOR

Mr Vince Erasmus

Mr Erasmus is an experienced industry participant with extensive skills and expertise in the management of softwood and hardwood operations internationally and has broad experience in the solid wood-processing environment. He is a former Director of the Forest Stewardship Council (FSC) Australia, the National Association of Forest Industries (NAFI), Australian Forest Products Association (AFPA) and the World Forestry Center in Portland, Oregon.

Board responsibilities: Chair of the Wood Products Advisory Group and Member of the Audit and Finance Committee

NON-EXECUTIVE DIRECTOR

(FROM OCTOBER 2013)

Mr Craig Taylor

Mr Taylor is Director and Principal of the Fifth Estate, a Sydney-based consulting firm that works at high corporate levels to determine strategy and develop business. A tertiary qualified forester, he was Vice President and Associate Principal for Jaakko Pöyry Consulting, running the Asia Pacific groups solid wood consulting group between 1997 and 2003.

Mr Taylor has held executive roles with the State Forests of New South Wales and Boral Timber and has wide experience in harvesting and log yard operations, production, planning and sales. He has published and presented internationally in the areas of hardwood plantations for high-value wood products, woodchip supply, demand and markets, plantations and water, regional industry development, forest products markets, restructuring the Australian wood panels industry, plantation investment and industry development strategies.

Board Responsibilities: Member of the Audit and Finance Committee (from 15 May 2014).
NON-EXECUTIVE DIRECTOR  
(UNTIL OCTOBER 2013)  

Dr Michele Allan  

Dr Allan is a non-executive director of a number of companies including Cooperative Research Centre Hearing, Food Standards Australia and New Zealand, Grape and Wine Research and Development Corporation, Meat and Livestock Australia and Ruralco Holdings Ltd. She is chair and non-executive director of Grains and Legumes Nutrition Council and William Angliss Institute, as well as an independent non-executive director of Birchip Cropping Group and New Zealand Food Innovation Network Company. She is also a Board adviser to Bread Solutions and a member of the Clean Technology Investment Committee. Dr Allan holds a Bachelor of Applied Science, Master of Management (Technology), Doctor of Business Administration, Master of Commercial Law, and is a Graduate and Fellow of the Australian Institute of Company Directors.

Board Responsibilities: Chair of the Audit and Finance Committee and Member of Remuneration and HR Committee.

MANAGING DIRECTOR  

Mr Ric Sinclair  

Mr Sinclair was appointed to the role of managing director of FWPA in June 2008. He is also a trustee of the J.W. Gottstein Memorial Trust. Previously, Mr Sinclair spent seven years in the grocery and food industry where he worked in operations, corporate finance and strategy roles. Mr Sinclair has held operations, marketing and strategy roles at Origin Energy, KH Foods, Chiquita Brands and Amcor/PaperlinX. He holds tertiary qualifications in forestry and a Master of Business Administration.

Board Responsibilities: Invited guest to the Audit and Finance Committee.

Program 1: Generic promotion

Objective
Stakeholder benefits
Background
Targeting audiences with branded communication channels
Key activities
Looking ahead
Objective
To promote the use of wood and wood products, the program seeks to generate a positive attitude towards wood products and to have them used more widely in both decorative and structural applications. The generic promotion program will achieve this by promoting the positive benefits of wood and addressing any real or perceived impediments to its use.

Activities within the generic promotion program will often incorporate results from FWPA-funded R&D projects and technology transfer activities, especially in the specifier information program.

Stakeholder benefits
FWPA’s investments in generic promotion focus on delivering stakeholder benefits by:

- Improving market awareness of, and satisfaction with, forest and wood products
- Increasing consumption of forest products and services that can avoid carbon dioxide emissions by by replacing more energy-intensive alternative materials with wood
- Increasing sequestration of carbon dioxide in the built environment through the carbon stored in wood products and avoiding emissions from more energy-intensive alternative materials
- Building the social licence that allows the industry to operate with broad community approval.

Background
Research over many years, often funded by FWPA (and its predecessor, FWPRDC), found that lack of knowledge was a major barrier to increased use of wood in building construction.

To address this, FWPA developed three activities within this program that focus on generating a positive disposition to the use of wood products in both decorative and functional applications. The consumer, specifier and partner programs promote the benefits of wood and address real or perceived impediments to the use of wood.

In addition to promoting forest and wood products, this program includes a secondary objective of promoting the industry itself. Many organisations and individuals either do not know, or are confused about, the role and activities of the forest and wood products industry. FWPA aims to develop a better understanding of the industry as a whole and its potential to significantly contribute to a sustainable, productive national economy.

Activities within the industry promotion strategy frequently incorporate the results of FWPA-funded R&D projects and technology transfer activities, especially the WoodSolutions program, aimed at building material specifiers. It also builds upon the outputs from the Standards Coordination Program and the new Statistics and Economics Program. This cross-fertilisation of the programs demonstrates the value of an integrated strategic plan and communications activities.
Targeting audiences with branded communication channels

During the year, FWPA continued to develop and implement the proven three-channel strategy:

› Wood. Naturally Better.™ – the Consumer Program focuses on the benefits of wood
› WoodSolutions – the Specifier Program provides information about designing and building with wood and wood products to material specifiers
› Wood. Naturally Better.™ – the Partner Program communicates to industry and trade.

Key activities

CONSUMER PROGRAM: WOOD. NATURALLY BETTER.™

Television advertising

In June 2011, a television commercial was introduced that was hosted by Peter Maddison, an award-winning architect and host of Grand Designs Australia, and presented under Planet Ark’s Environmental Edge brand.

The commercial is designed to confirm wood’s aesthetic advantages by showing it in a beautiful setting – an award-winning house – while communicating the fact that wood stores carbon and that using more wood has positive environmental benefits.

The commercial was aired in the 2011/12, 2012/13 and 2013/14 financial years, with the last campaign, in April-May 2014, complemented by digital and online activity.

A short digital display campaign in Canberra airport provided a platform for the 2014 Planet Ark/Environmental Edge, Wood. Naturally Better.™ television advertising campaign. A budget approaching $700,000 enabled a television schedule in major metro and regional markets, complemented by online video at popular news and entertainment websites.

The television commercial was seen at least once by more than 60% and 3+ times by more than 40% of people in metropolitan markets. The online element of the campaign was seen by nearly 20,000 people.

Tracking research showed continuing excellent results, contributing not only to an increased understanding of the advantages of wood, but indirectly towards increasing the social licence for the industry to operate.
**Consumer research**

Understanding community attitudes is an ongoing process achieved by combining formal market research and informal discussions with stakeholders and allied and partner organisations. Information about the audiences addressed by FWPA programs can increase the effectiveness and lower the cost of communications and associated activities.

During the past year, formal consumer research involved two studies, one a full tracker in a series (number 11), the other a version with a smaller sample size that was undertaken to measure the effect of the television and online advertising campaign.

The long-running full tracker studies used a nationally representative sample of about 1,000 people to deliver statistically significant results. They continued to show previously observed trends. Areas covered include:

- Attitudes towards building materials and their attributes
- The role of various considerations in the choice of materials
- Awareness of sources of information and their reliability
- Understanding of the carbon cycle and the roles of forest and wood products
- Degree of recall of FWPA advertising and related communications.

**Perceptions of wood over other materials**

- **Wood**
- **Steel**
- **Bricks**
- **Aluminium**
- **Concrete**
- **Plastic**
The tracker studies have shown an increase in consumer understanding of the fact that wood stores carbon. In particular, there was a marked increase in consumer awareness of the following key messages:

- carbon that is stored in wood stays there even when the tree has been harvested
- wood products in the home store carbon
- wood is an environmentally friendly material.

**The positive emotional characteristics of wood**

- Wood
- Plastic
- Concrete
- Steel
- Bricks
- Aluminium

**Consumer research webinar**

Click the link below to view the research webinar, presented to industry members by Howard Parry-Husbands, Pollinate, as part of the FWPA R&DWorks webinar series. The presentation looks at the latest consumer research and discusses the results and perceptual trends that have been identified.

WOOD. NATURALLY BETTER™
SPONSORSHIPS AND PARTNERSHIPS

Carefully chosen partnerships can be a cost-effective way to generate awareness and media coverage while building relationships of value.

During the past year Wood. Naturally Better™ sponsored, partnered and participated in a select range of events and organisations, including:

› WOOD: art design architecture
› Planet Ark
› Melbourne Building & Home Improvement Expo
› National Carpenters Day
› Grand Designs Live
› Women in Design Seminar
› Going Bush TV series, View Episode 5, Segment A.

Wood. Naturally Better™ Partner Program

As awareness of the Wood. Naturally Better™ logo grows, it becomes a more valuable asset to promote the use of wood and timber products.

Membership of the Wood. Naturally Better™ Partner Program is free to businesses and organisations operating in the forest and wood products industry. The program licenses partners to use the logo in their branding and communications and gives them access to a range of Wood. Naturally Better™ promotional items.

The Partner Program also provides organisations that supply wood and wood products to the design and construction sectors with a link to the WoodSolutions brand and related activities that can support their products and sales.

Read more about joining the Partner program here.
THE PLANET ARK PARTNERSHIP

Partnering with Planet Ark provides FWPA’s consumer promotion campaign, Wood. Naturally Better.™, with an increased profile and ability to cut through when talking to consumers. Planet Ark is one of Australia’s most trusted sources of environmental information and the use of its Environmental Edge brand contributes to the Wood. Naturally Better.™ television commercial’s strong performance.

Planet Ark’s Make it Wood campaign promotes the substitution of sustainably sourced wood products for other building materials as a practical way to address climate change. Increased understanding of the environmental benefits of wood products, especially in a carbon-constrained economy, can help support the industry’s social licence to operate.

During the year, a range of activities have been undertaken in conjunction with Planet Ark. These included:

- **30 second television commercial**
- **Outdoor advertising**
  
  Large-format posters were displayed at selected Sydney train stations, reaching more than half a million people.

**Wood Encouragement Policies for local councils**

The Wood Encouragement Policies initiative encourages councils to think about using more wood in their own and public buildings. It included attending and supporting an initiative by Victoria’s Latrobe City Council to develop a wood encouragement policy.

**The Make It Wood Campaign newsletters and website – www.makeitwood.org**

The Make it Wood newsletters and website provides a range of resources and encouragement to use wood. The Make it Wood campaign is particularly targeted at home renovators and DIY builders.

**Melbourne Building & Home Improvement Expo**

Planet Ark’s Make it Wood and Wood. Naturally Better.™ sponsored the ‘Building & Renovation Stage’. Hosted by Planet Ark’s Rebecca Gilling, the stage featured 26 free seminars and demonstrations over three days.

**Grand Designs Live – Sydney**

More than 16,000 visitors to this event had the opportunity to see the Sustainability Stage presentations, display stand and expert advice sponsored by Make it Wood and Wood. Naturally Better.™
Case study

NATIONAL CARPENTERS DAY

The fifth National Carpenters Day, sponsored by Wood. Naturally Better.™, was celebrated at more than 180 venues around Australia by more than 10,000 carpenters. Many of the barbecue hosts were Wood. Naturally Better.™ Program Partners. Other supporters included building industry organisations, training bodies and the Australian Government through Australian Apprenticeships.
SPECIFIER PROGRAM: WOODSOLUTIONS

Research has continually identified the lack of readily accessible, credible information as a major impediment to specifiers – the architects, engineers, building designers, quantity surveyors, property developers and others involved in specifying the use of particular building materials.

WoodSolutions was created to establish a credible platform for delivering independent, generic information to specifiers.

Activities during the year built on established platforms and included:

- Personally delivered technical presentations – WoodSolutions Tutorials and Seminars
- Design and specification information – WoodSolutions Technical Design Guides
- Sponsorships, events and alliances with key professional associations
- The WoodSolutions education microsite.

Where possible, WoodSolutions activities are aligned with the continuing professional development (CPD) requirements of professional bodies such as the Australian Institute of Architects, Engineers Australia, Building Designers Associations and other key bodies at national and state levels.

WoodSolutions website

This online knowledge database makes information about the use of wood and timber products more accessible to building specifiers. The information has been sourced from research studies, technical guides, building codes and standards.

The site also contains inspirational case studies, presentations and videos from WoodSolutions seminars and events, and links to product suppliers so it can be a single, authoritative source of information.

During the year, the functionality of the site was enhanced by the addition of an event calendar section. This allows industry members to promote events relevant to building specifiers.

Visit the website events calendar here

The WoodSolutions website is an innovative example of how the internet can aggregate and disseminate complex information.

Visit the website here

Content added throughout the year included technical design guides, videos, presentations and case studies.
WoodSolutions Tutorials

Designed to be delivered at workplaces, professional meetings or viewed online, WoodSolutions Tutorials and Seminars are part of the technical and training resources created to promote the use of wood through increasing knowledge. The tutorials and seminars were delivered by State associations (e.g. Timber Queensland, Timber Development Association), universities, representatives of product and service suppliers and private consultants.

See the tutorials online [here](#).

WoodSolutions Presenter Workshop

To improve the delivery of WoodSolutions tutorials and seminars, a presentation skills development program was delivered to the technical team in December. It was followed by a strategic planning meeting which discussed a range of issues that will inform the development of future tutorials and seminars.

“The series presented by WoodSolutions and Timber Queensland have been thoroughly worthwhile! Our staff have enjoyed Colin’s relaxed and highly informative presentations, and their knowledge of the local timber industry, available products, and how to specify timber has certainly increased tremendously. We would definitely recommend these talks to everyone in the industry!”

– Michael Bailey
Cox Rayner Architects
Technical Design Guides

WoodSolutions Technical Design Guides are part of a suite of technical and training resources produced to support the use of wood and how it can be specified. During the year, four guides were completed and published on the website, which brings the total to 20.

Domestic Timber Deck Design and Fire Precautions During Construction of Large Buildings were two new titles published during the year.

WoodSolutions Software

Software presented under the WoodSolutions brand is part of both the Generic Promotion, and Standards and Codes programs, and demonstrates the synergies of FWPA's Strategic Plan.

To be supported by FWPA, software must produce results that simplify and encourage the specification and use of wood and wood products.

Bushfire Calculator

The online bushfire calculator, launched in the first half of 2014, gives home owners, architects, building designers, developers and others a convenient way to estimate the bushfire attack level (BAL) without having to manually look up tables. The calculator shows how different placements or orientations of a home on a site can change the BAL. The rating has implications for both the design of a building and the specification of materials. Extensive testing has ensured that the results are within the scope of the bushfire standard (AS 3959).

See the Bushfire Calculator here

Timber Solutions Software

The updated Timber Solutions software package was being tested by a range of users at the end of the 2013/14 year. The update includes the revised properties for MCP10, 12 and 15 timber products. The software allows users to generate AS 1684 type span tables, individual timber member designs, bracing and tie-down designs for non-cyclonic and cyclonic wind regions. There is also the ability to cost materials for a particular design. It is anticipated that version 2.0 of this popular program will be released in the second half of 2014.

WoodSolutions Education

Overlapping with Program 3, Capacity and Education, educational activity under the WoodSolutions brand demonstrates the synergistic nature of FWPA's strategy.

Structural Timber Kit Survey

A teaching aid that included a structural timber kit of examples of commonly used timber and engineered wood products was distributed to 60 TAFEs in a pilot program.

A survey in early November 2013 to evaluate the program’s benefits achieved a 30% response rate, with a good national representation.

The survey respondents reported that:

- 86.7% have used the structural kit in their teaching
- 85.7% felt confident using the kit and 71.4% have shared the kit with colleagues
- 92.9% said they would use the kit again
- 42.9% said they would pay $50 for the kit, 35.7% said they would pay $100 and 21.4% said they would pay less than $50
- 80% of respondents use the WoodSolutions education website.
WoodSolutions education micro-site

Tertiary education is one of the areas that WoodSolutions targets. While many students register and download materials from the main WoodSolutions site, providing educational materials to teachers and lecturers promotes the inclusion of wood-based topics in curricula.

The WoodSolutions education micro-site was launched in March 2013. During the past year, the navigation of the site has been restructured to provide easier access for different course topics.

In December 2013, a survey was distributed at the Australasian Association for Engineering Education Conference. WoodSolution’s participation at the conference reaffirmed engineering educators’ enthusiasm for the educational program support and a desire for ongoing assistance.

The survey results showed that there is scope to raise the profiles of both the main WoodSolutions site and the education site. However, a large majority of those that were aware of the websites rated them as either excellent or good. Many respondents who were not aware of the WoodSolutions resources indicated that they would consider using them with their students.

Establishment of the WoodSolutions Education Advisory Group

The Education Advisory Group was formed to discuss the current needs of timber-related courses in the university sector, how the existing resources might serve these needs and what new resources or approaches are required. The group will continue to share information and meet as required to provide feedback and guidance for current and future activities.

View the WoodSolutions education microsite here.

WoodSolutions sponsorships and events

During the year, WoodSolutions partnered with professional organisations and participated in a select range of events and activities, including:

- Supporting the Australian Institute of Architects (AIA) Continuum (professional development) series
- Providing a speaker and presentation for the AIA's National Seminar Series
- Providing a speaker for Engineers Australia Structural Colleges – Qld, Vic, WA
- Organising a coach tour to winning design projects for AIA Conference attendees.

WoodSolutions also sponsored:

- AIA National Conference Queensland Regional Architect Conference ‘Spirit of Place’
- AIA 1:1 student/mentor design and construct exhibition
- Building Designers Association of Victoria (BDAV)
- Master Builders Australia
- Master Builders Conference and Awards
- The 2013 Australian Timber Design Awards
- Women In Design Speaker Series 2013
- BAF Conference – Building Australia’s Future Conference 2013
- Victorian Building Authority Melbourne Forum 2013
- Australian Institute of Building Surveyors Seminar 2013
- DesignEX 2014
- WoodSmart Construction tour to New Zealand 2014
- Australian Healthcare Week Conference 2014
- DesignBuild Exhibition Specifier Seminar 2014
- Frame Australia 2014
- Seminars in conjunction with industry bodies in WA, SA, ACT, NSW, Qld and Vic.
SPECIFIER RESEARCH CONFIRMS WOODSOLUTIONS ACTIVITIES

April to June 2014 saw the third round of the ongoing specifier research. The primary objective was to investigate the awareness and perceptions of the WoodSolutions program and the results will be used to inform future decision making about the program and associated activities.

For this round of research, the core audience of architects, building designers and engineers was supplemented by related professionals, accessed through relationships that FWPA have developed with their professional bodies. The extra participants included building and quantity surveyors.

The results showed that movements in perceptions of wood and wood products are generally aligned to the messaging in WoodSolutions communications. The graphs on this page show the perceptions of environmental sustainability and installed value for various materials.
LOOKING AHEAD

During 2014–15, FWPA’s industry promotion activities will focus on the successful platforms that have been built over the past few years to:

› Increase consumer awareness of advertising and/or brand awareness and improving perceptions of wood as an environmentally positive and suitable material
› Increase building specifier awareness of activities and improve perceptions of wood as an environmentally positive and suitable material, as determined through website tracking and periodic opinion surveys
› Increase industry support of generic promotion activities through active participation and support of the Wood. Naturally Better.™ Partner Program.

Activities to achieve these objectives will include:

› Continued support of Planet Ark and the MakeitWood program
› Some limited TV advertising
› Continued development and enhancement of the WoodSolutions program
› Increased focus on tertiary education materials for future building specifiers.
PROGRAM 2: Research, Development and Extension (RD&E)

Objective

Stakeholder benefits

Background

Industry and government priorities

R&D project portfolio

Benefit-cost analysis

New project investments

Ownership of intellectual property resulting from funded projects

FWPA industry advisory groups

R&D projects

Looking ahead
PROGRAM 2: Research, Development and Extension (RD&E)

Objective
To invest in and coordinate RD&E to improve the industry’s competitiveness, inform its climate change response, enhance investment, increase usage, and ensure the sustainability of forests, wood products and services.

Stakeholder benefits
FWPA’s RD&E investments are required to deliver clear benefits to stakeholders (members, levy payers and the Australian Government) through:
› Improving new products matched to market needs
› Increasing industry profitability and efficient use of inputs throughout the industry’s value chain
› Improving industry investment confidence by reducing risk
› Enhancing sustainability, as measured in economic, social and environmental terms

Background
The RD&E program accounted for one-third of the FWPA expenditure for 2013/14. Project investments are managed and reported through three sub-programs that represent the industry value chain:
1. Market Access and Development
2. Wood Products
3. Sustainability and Resources
Each sub-program is administered in collaboration with a Board-appointed industry advisory group of senior executives from FWPA member organisations.

The selection of projects and their priority within each advisory group are guided by a series of investment plans that describe the industry outcomes and benefits that are sought. Individual investment plans are developed by independent industry consultants. Industry, research providers and other key stakeholders assist in defining and prioritising preferred R&D outcomes through a broad consultation process.

Click here to see a complete list of projects

Industry and Government priorities

MARKET ACCESS AND DEVELOPMENT
The principal outcome from the Market Access and Development sub-program is continued and expanded industry access to key forest and wood products markets.
Priority research areas include increased understanding of market attitudes to – and perceptions of – wood products, as well as quantification and reporting of key environmental and design attributes of timber building products. Industry uses the results of projects funded under this program to support the expansion of product markets. The results assist in removing regulatory and market barriers to using timber products in domestic and commercial building applications.

WOOD PRODUCTS
Projects funded under the Wood Products sub-program aim to improve manufacturing processes to generate maximum value recovery from available resources. Priority areas include optimising and reporting the material properties of timber products, optimising process energy, chemical and water consumption, waste stream use, and developing new products – including hybrid materials – in response to market demands and opportunities.

SUSTAINABILITY AND RESOURCES
The Sustainability and Resources sub-program supports the acquisition of knowledge about the effects of management decisions on the functional processes of forests that are mainly managed for wood production. Industry objectives sought from this program include decision support systems for forest management, economically efficient and low environmental impact forest operations, and new environmental services.

Other priorities include: applied knowledge of wood properties; improved techniques for the segregation of standing trees, logs, timber and fibre to the most appropriate use; and methods to improve wood properties.
EXTENSION ACTIVITIES

A number of initiatives to communicate the results and benefits of completed research and development investments are resourced and coordinated within this program. Each project proposal includes a specific industry engagement and technology transfer plan designed to ensure stakeholders are aware of research outputs. This is achieved primarily through project steering committees and end-of-project workshops and seminars.

FWPA hosts a regular series of fortnightly webinars to highlight recent research findings to stakeholders and to generate broader awareness of the R&D activities within the sector. Each webinar is recorded and made available, along with the relevant final reports, on the FWPA website.

R&D project portfolio

During 2013/14, a total of 23 contracted research projects were completed and delivered to stakeholders and FWPA levy payers. In addition, three postgraduate scholarships were completed during the year.

MARKET ACCESS AND DEVELOPMENT

FWPA Market Access and Development (MAD) funding priorities are grouped around two priority areas identified by the MAD advisory group:

- Timber construction in commercial and industrial buildings
- Wood products in sustainable buildings

WOOD PRODUCTS

Continuing projects within the Wood Products program focus on the overall performance and yield of timber products. During 2013/14, these were primarily delivered through FWPA’s established investment in the joint Australia-New Zealand Solid Wood Innovations research consortia. In view of the current market conditions and member feedback, further R&D investment in this sub-program has been deferred until trading conditions improve and sufficient levies can be secured to fully resource this program.

SUSTAINABILITY AND RESOURCES

Project investments within the Sustainability and Resources sub-program are aligned to the following active FWPA investment priorities:

- Maximising product yields and values from current resources
- Improving wood quality and yield, and tools for forest management
- Forest biosecurity and preparedness
- Mitigating and adapting to climate change and the management of the carbon cycle in plantations and native forests.
OTHER INVESTMENT PLANS
A further four R&D investment plans have been completed and approved for publication. These investment plans describe R&D priorities in the following areas:

› Genetics and tree improvement
› Product performance and yield
› Forest water use and efficiency and access to water resources
› The use of wood in residential construction.

In light of the current market conditions, it has been decided to defer further investment in these R&D priorities until industry profitability recovers to a point where the required levy increases can be supported.

OTHER PROJECTS FUNDED
FWPA accepts project funding proposals not implicitly linked to the endorsed R&D priorities on a case-by-case basis. To secure FWPA support, these projects must demonstrate direct relevance to industry needs and deliver sufficient public good benefit to be approved. In view of the current industry and market conditions, FWPA will focus its 2013/14 investments towards the delivery of identified industry R&D priorities and maintenance of other company programs using available levy resources.

Benefit-cost analysis
Each year, a subset of R&D projects completed over the previous five years are randomly selected for benefit-cost assessment in accordance with the evaluation protocol developed by the Council of Rural Research and Development Corporations. The assessments are undertaken by independent economists in close consultation with research providers and industry collaborators to determine the net social, environmental and economic impacts of FWPA-funded projects to both the industry and broader community.

Project investments
During 2013/14, FWPA invested $3.12 million to support research and development projects and programs targeted towards delivering the industry outcomes identified within the investment plans for its identified R&D priorities.

The R&D investment plans describe the outcomes sought from each investment area as well as the recommended levels of FWPA funding. These funds are set on the basis that additional industry and/or collaborator funding and in-kind support would be pledged to proposals focused on the delivery of tangible industry benefits.

Ownership of intellectual property resulting from funded projects
The company funding policy is that all intellectual property (IP) created with FWPA funding is owned by the research provider, with FWPA maintaining an equity position in future IP commercialisation income. One of the conditions of FWPA funding for R&D projects is that levy payers have a beneficial right of access to final commercialised IP, through either reduced or waived royalty structures or other such arrangements that reflect the value of the levy funds provided to FWPA by the industry.

Where project outcomes are of value to the broader primary industry community, FWPA seeks to collaborate with other relevant RDCs and funding bodies to leverage the value of the levy funds invested.
FWPA industry advisory groups

FWPA operates a series of industry advisory groups that are formed to provide specific advice and feedback on industry R&D needs and develop relevant R&D investment plans to guide FWPA’s project funding decisions.

FWPA’s three advisory groups meet throughout the year and review and critique investment plans and project proposals to ensure that the subsequent investments have a strong alignment to industry needs and address genuine information gaps.

The three groups, which are structured to cover the whole value chain, are:

- Market Access and Development Advisory Group
- Wood Products Advisory Group
- Sustainability and Resources Advisory Group

CURRENT ADVISORY GROUP MEMBERS

**Market Access and Development Advisory Group**

- Mr John Simon (Chair)
  FWPA Director
- Mr Matthew Wood
  Stora Enso Timber Australia Pty Ltd
- Mr Clinton Skeoch
  Boral Timber Division
- Mr David Meyer
  Meyer Timber Pty Ltd
- Mr Gerry Gardiner
  Asian Pacific Timber Marketing Pty Ltd
- Mr Jeff Gibbson
  Hyne Timber
- Ms Christine Briggs
  Timberlink
- Mr Gary Kiddle
  Wespine Industries Pty Ltd

**Wood Processing Advisory Group**

- Mr Vince Erasmus (Chair)
  FWPA Director
- Mr Peter Law
  Wesbeam Pty Ltd
- Mr David Beifield
  Wespine Industries Pty Ltd
- Dr Trevor Innes
  Timberlink Australia
- Mr Michael Murphy
  Carter Holt Harvey Woodproducts Australia
- Mr Craig Kay
  Tilling Timber Pty Ltd
- Mr Stephen Holtorf
  Hyne Timber
- Mr Kim Harris
  Carter Holt Harvey Woodproducts Australia
- Mr Chris McEvoy
  Radial Timber Australia

**Sustainability and Resources Advisory Group**

- Mr Evan Rolley (Chair)
  FWPA Director
- Mr Mike Sutton
  Forests NSW
- Dr Andrew Lyon
  FPC (WA)
- Mr Edwin Schramm
  Bunbury Treefarm Project
- Mr Don Aurik

- Dr Ben Bradshaw
  Australian Bluegum Plantations Pty Ltd
- Mr John Hickey
  Forestry Tasmania
- Mr Andrew Morgan
  SFM Environmental Solutions
- Dr Jim O’Hehir
  Forestry SA
INTERNATIONAL COLLABORATIONS

Working with international collaborators delivers tangible benefits to FWPA levy payers and extends the reach and purchasing power of its investments.

For example, levy payers’ funds invested by FWPA are matched by the Australian Government. When this money is invested in a New Zealand research company, the NZ Government matches the total FWPA investment, which provides good leverage.

During the year, FWPA continued its investments in the New Zealand based research consortia; Solid Wood Innovations (SWI) and the Compromised Wood consortium. In early 2014, SWI obtained a two year funded extension to its research program. As part of the application to the NZ Ministry of Business, Innovation and Research, FWPA has also committed funding of $250,000 a year for the period of the extension.

In addition to membership of the International Union of Forest Research Organisations (IUFRO), the FWPA maintains membership in the European Innovawood consortium. This consortium combined four early R&D and technology transfer networks covering furniture manufacture, forest and timber education and technology transfer, advanced wood processing and engineering, and timber research. FWPA subscribed to the network to strengthen awareness and engagement with European-based research providers.
R&D projects

A full list of projects and their status can be viewed [here](#).

**PNA252-1112: Demonstrating legal timber – Industry benchmarking and due diligence tools**

**Australian illegal logging laws to help legitimate forestry worldwide**

New Australian legislation established penalties for any business importing or processing illegally harvested timber. The Illegal Logging Prohibition Act 2012 and the Illegal Logging Prohibition Amendment Regulation 2013 (Regulation), which take effect on 30 November 2014, stipulate that anyone importing illegally logged timber into Australia or processing illegally harvested raw logs, can face up to five years in jail in addition to fines of $85,000 for an individual and $425,000 for a corporation.

Under Australian law, illegally harvested timber is deemed to be timber that is harvested in contravention of the laws of the country in which it was harvested. The legislation is similar to that operating in Europe and the United States. Covering companies harvesting trees, producing wood products locally or importing timber and timber products into Australia, the legislation is designed to support legitimately harvested forestry by preventing cost undercutting and reducing competition from suppliers of timber products made from illegally harvested wood.

It is vital that businesses operating in the sector understand what they must do to comply with the legislation. Industry, via FWPA, supported the Timber Development Association (TDA), to develop a suite of tools and guidance for importers and domestic processors. The tools are based on compliance tools developed by industry in Europe and the United States; they have been extensively refined in consultation with Australian timber importers, domestic industry, industry associations and the Federal Department of Agriculture and Forestry.

An Australian Industry Timber Due Diligence (AITDD) system has been developed for importers to make importing legally harvested timber as straightforward as possible. The AITDD system consists of a comprehensive, easy-to-use suite of guidance tools to set up and implement a due diligence process for any importing business. Its templates include a company due diligence manual, information gathering and risk assessment worksheets, and a questionnaire through which suppliers can gather additional information when required.

Businesses processing locally grown logs have a low risk of sourcing illegally harvested logs. The Australian Government has included State- and Territory-specific guidelines in the Regulation. The Domestic Processors Overview and a Domestic Processor Due Diligence Summary will help businesses document the source of their raw logs and ensure they have the relevant permission to supply logs to the processor.

The AITDD tools are free and available from www.timberduediligence.com.au

Shining a light on treated pine timber

The Australian building industry relies on pine timbers for house framing and construction. The timbers are selected to be fit-for-purpose in that they have consistent strength, are economical and in abundant supply. However, they have limited natural resistance to attack by fungi and insects.

In regions where termites or borers might be active, building timbers are required to be treated with a pyrethroid preservative such as bifenthrin or permethrin to H2F level (i.e. for above ground, interior use).

While manufacturers of H2F products have reliable processes in place to produce to specifications sufficient to resist insect attack, they have to rely on off-site laboratory testing to ensure quality is maintained to meet Australian Standards. The turnaround from sampling to receipt of analysis results can be 1-2 days behind production. This leads to manufacturers purposefully over-treating to ensure the product remains in specification. Research funded by FWPA shows that near infrared (NIR) spectroscopy can assess the preservative content in H2F treated timber cheaply, quickly and accurately.

Roger and his team used a portable NIR system equipped with a fibre optic probe fitted with a stop block to ensure all measurements were taken consistently at the correct depth from the timber’s surface. They measured the NIR response from timber samples with known, but different, concentrations of treatment chemicals to create a calibration chart. They then compared their models with samples from operating mills to see how accurate both the NIR method and the mill assessments actually were.

The research took over a year, but the results show NIR can deliver precise and rapid results.

“Using NIR, it takes 30 seconds to determine the preservative levels in timber treated to the H2F level. We’ve had a quick look at H3 timber, and we think it looks possible for NIR to work there as well. It might also work for H4 timber, but we haven’t looked at that,” Roger said.

“One of the beauties of using NIR is that we measure a constant depth thereby removing one major source of error in sampling using the standard method.”

A cheap and accurate assessment method for screening the in-process production environment means manufacturers will be able to monitor their treatment process more frequently and potentially use less treatment chemical because their need to over-treat is reduced.
Sequestration lasts longer than previously thought

Each year, about two million tonnes of paper and another two million tonnes of wood and engineered wood products (EWPs) are disposed of in Australian landfills. Do these wood products actually decay?

It turns out that the carbon in the wood is effectively being locked up for much longer than is assumed in carbon accounting schemes.

Fabiano Ximenes from the NSW Department of Primary Industries has investigated the long-term storage of EWPs in landfill in Australia, in a project funded by FWPA, Laminex and the Australian Government’s Department of Agriculture Fisheries and Forestry through its Forest Industries Climate Change Research fund.

“We’ve been working on the issue of carbon storage in forest products in landfills for over 10 years now. Initially we focused on sawn wood products, and the research results clearly suggested there was a high level of carbon storage in those products,” Fabiano said. “The idea for this project was to test the levels of carbon storage in composite wood products such as MDF and plywood. We went to landfill sites with an excavator, recovered large volumes of target products and took them back to the laboratory for a proper analysis.”

Test pits were excavated in landfills in Sydney, Cairns and Brisbane, and sample wood products (that had been buried for between 15 and 20 years) were taken at 0.5 metre intervals until the bottom of the landfill was reached at a depth of up to 10 metres.

Back in the laboratory, the researchers examined the landfill EWPs to determine how much of the wood’s original components (such as cellulose, hemicellulose and lignin) were preserved.

An important part of the project was the bioreactor experiment, where optimal landfill conditions are replicated in 8-litre jars in the laboratory. The EWPs are cut up so they fit into the jars and then the jars are filled with leachate, the liquid that comes from landfills and is full of anaerobic bacteria. Researchers monitor the gas that is produced over time from each jar to correlate how much gas was produced with how much carbon was left in the EWP.

The project was able to determine the long-term carbon storage of particleboard, medium-density fibreboard (MDF) and high-pressure laminate in optimal laboratory decay conditions. The particleboard and MDF reactors produced gas (predominantly methane) for two months and then stopped, while high-pressure laminate did not produce any gas. The results show carbon loss was very low: particleboard stored 98.25% of its initial carbon, MDF stored 99.35% and high-pressure laminate stored 100%.

These findings show that on average 99% of all the carbon in EWPs disposed of in Australian landfills can be considered to be stored indefinitely, that EWPs have a beneficial impact on greenhouse gas mitigation efforts and factors used to determine greenhouse gas emissions from wood and EWPs in landfills should be drastically reduced to reflect the findings of this study.

“It doesn’t matter if the product is in landfill for 20, 50 or 100 years, what our results are suggesting is there is no difference in the levels of decomposition because there’s virtually none,” Fabiano said. “We can safely claim that those products are having a real mitigation effect from a greenhouse gas perspective. We are using this as an argument to say let’s look at the life cycle of carbon in forest products, and see how we can appropriately include them in current and future greenhouse gas mitigation projects.”
PNB131-0809: The Australia/New Zealand Solid Wood Initiative: Better performing structural products manufactured with higher efficiency and using less energy and water

Solid Wood Innovation (SWI) is a trans-Tasman research consortium focussed on radiata pine, the major softwood plantation forest species. FWPA’s continued support for this research is mentioned in this report here. The following two case studies are examples of SWI work. Visit the SWI website here.

**Cant optimisation tool**

The cant optimisation tool has been designed to increase the efficiency of structural wood processing through the use of acoustic and x-ray systems. The acoustic system measures sonic resonance that gives the average green velocity of the wood in a cant, while the x-ray system is used to develop a green density profile across the cant. Together, these factors give an overall stiffness profile that is used to determine the most efficient sawing pattern to produce structural timber.

The first Australian sawmill to use the cant optimisation tool installed the system in October 2012. Another followed in 2013 with a third planning to install the system in 2014. To utilise the cant optimisation tool, a sawmill must have a flexible resaw facility that can change patterns between cants, as well as an area where cants are travelling transversally in order to measure the green density profile. However, a recent trial in the United States of a linear prototype of the cant optimisation tool showed that a dedicated area for the cants to travel transversally is not necessary, opening up the possibility of deployment in more sawmills.

**Kiln schedules**

Heating kilns is an energy-intensive process; 60% of all energy consumption in manufacturing lumber is used to remove water from wood. Optimising kiln usage by reducing steaming times and introducing dynamic kiln scheduling will save energy without compromising wood quality. The new kiln techniques have been adapted by a range of companies processing more than 500,000 m³ of lumber.

Modelling the perfect pine plantation

With support from FWPA, Scion, HVP and ForestrySA, Dr David Drew and his research team at CSIRO created ‘e-Cambium’, a process-based model that takes into account how Pinus radiata trees use water and nutrients to build wood cells in different climate and environmental conditions.

It is designed primarily to enable forest managers to predict tree stem growth, wood density and stiffness responses under a range of conditions, particularly where current data is not available (such as increasing average temperatures or a new silvicultural intervention).

The model can incorporate outputs from two existing tree-growth models: the more complex CABALA model, which gives very detailed results, or the simpler to run and use 3PG (Physiological Principles Predicting Growth) model, which gives slightly less accurate results.

The team measured climate data and tree growth daily at four sites in Australia and two in New Zealand. At the end of the 2½-year monitoring period pith-to-bark core samples were taken from each tree as close as possible to where the dendrometer had been measuring growth. These core samples were analysed to measure wood properties such as density, which were then matched with daily patterns of growth and environmental factors such as temperature and rainfall.

While e-Cambium may have been based on pre-existing theoretical models of tree growth, it evolved significantly as the volume of detailed data grew.

The e-Cambium model, with its algorithms derived from data from the six measurement sites, was calibrated against wood property data from another 10 sites. The model was able to predict around 80% (using CABALA inputs) of the variability seen in wood density in trees from these sites. The 3PG version gave around 70% accuracy. Although predicting final stand volume wasn’t the project’s priority, indications are that the model would have similar accuracy in predicting wood volumes from a site.

The current e-Cambium model is available to all FWPA members for testing and to explore the effects of different sites, silvicultural regime and weather conditions on both tree growth and wood properties.

CSIRO
A comprehensive method to measure the impact on biodiversity in life cycle assessments

Many organisations measure their environmental impacts in order to abide by regulations or for marketing purposes. A life cycle assessment (LCA) measures the environmental impact of a product or service at all stages of its supply chain. One important aspect of an LCA is assessing the impact on biodiversity.

Existing LCA methods have lacked comprehensive data on the relationship between land use and biodiversity, and there is no current universal framework that allows for biodiversity impacts to be measured at alternative scales.

In 2010, a ‘BioImpact’ system was proposed to meet these challenges. The system consists of a thorough literature review and canvassing expert opinions on the biodiversity threats of a given project within a disturbance impact framework.

Four production systems in NSW were used in developing BioImpact, with the results compared with existing methods of net primary productivity (NPP) and species richness. The BioImpact results were in line with expectations, while the existing methods were found to be inadequate in accurately measuring biodiversity impacts. Results from the NPP method suggested that a pine plantation has a higher biodiversity value than native forests in national parks in the same region, while the species richness method ranked cropping and grazing systems above managed forest systems in terms of biodiversity value.

BioImpact discerns impacts from different land uses and provides a comprehensive assessment of the biodiversity impact of different forestry operations. It is simple in application and can be applied to any region in the world where the literature and experts are available. The holistic nature of BioImpact means it can thoroughly assess the default assumption in existing LCAs that biodiversity impacts from forestry operations negates other positive environmental impacts that these operations may have.

When more BioImpact data has been collected in Australian and NZ conditions and biodiversity scores have been tabulated, LCA practitioners will have access to a database that will readily provide accurate information on biodiversity impacts of different forestry operations.

NSW Department of Primary Industries
PNC304-1213: Predictive relationships to assist fertiliser use decision-making in eucalypt plantations

Maximising the effect of fertiliser through timely application

Almost one million hectares of hardwood plantations are growing in Australia. Dominated by *Eucalyptus globulus* (55%) and *E. nitens* (24%), they are mostly cultivated for pulpwood on 10-15 year rotations. Many are now ready for harvesting and subsequent replanting.

Experience shows that applying appropriate amounts of fertiliser can prevent second rotation trees being less productive than first rotation trees, but there is no reliable, cost-effective method to predict how a plantation will respond to fertiliser or the best time to apply it.

With funding from FWPA, researchers from The University of Melbourne, Australian Bluegum Plantations Pty Ltd and Hancock Victorian Plantations have determined that fertilising the plantation at mid-rotation (i.e. at age 4–5) increases final volume (at year 10) by up to 20.8% at responsive sites. This equates to an increased yield of 42.9 cubic metres per hectare per year.

The research showed that fertilising a plantation at both planting and year one increases the plantation’s final volume by 5.6%, while plantations that were fertilised at planting (including at one year) and at mid-rotation showed a 10.6% increase in volume relative to control sites.

The researchers compared predictive models with actual wood volumes from plantation test sites. Although the best models only predicted short-term growth response (i.e. one year after fertiliser application) with any level of accuracy, without better models being available, they do have value, particularly in identifying sites highly unlikely to respond to fertiliser.

To run any simulation model, a plantation manager needs to acquire appropriate site data (such as climate variables) and send soil or leaf samples to a laboratory for analysis. These results are used by the model to predict the percentage of volume growth if fertiliser were to be applied.

At this stage, the researchers suggest plantation managers use the models as tools to rank sites according to predicted fertiliser response, allowing managers to deploy fertiliser resources to sites more likely to show a significant (i.e. greater than 10%) volume growth response and avoid applying fertiliser where it is not needed.

Research Provider:
Hancock Victorian Plantation
PNC 216-1011: Analysis of long-term productivity and productive capacity of a radiata pine plantation on infertile fine textured soils

Raising awareness of improved inter-rotational management in radiata pine

To maintain pine plantation productivity and profitability through future rotations, growers need to understand the balance between the production of timber, carbon take up, water use and other processes occurring in their plantations.

This long-term study measured changes in productivity, productive capacity, carbon accumulation and hydrology in pine (Pinus radiata) plantation sites from the 1960s and 1970s to the present.

The research focused on pine plantation plots in the Lidsdale State Forest, about 130 km northwest of Sydney. Plots analysed during the first rotation (as early as 1961) were re-measured in subsequent rotations. Where significant quantities of phosphatic fertiliser had been applied in the second rotation, productivity in the second rotation was more than 30% higher than in the first and had a residual effect on productivity into the third rotation. For plots where significant quantities of fertiliser nutrients were not applied, the second rotation productivity was lower than the first by 5–8%. This appears to be a result of nutrients, especially calcium, potassium and boron, being removed during harvesting.

The research also found that the mature pine plantations accumulated 2.14 tonnes of carbon per hectare per year between 42 and 55 years of age, and most of this was in the vegetation. The subsequent rotation accumulated carbon at a rate of 5.5 tonnes per hectare per year in the first 12 years of growth.

As forests develop, they use water and consequently runoff declines; then, as trees mature productivity decreases and runoff increases. The researchers suggest that to minimise the long-term patterns of decreased and increased runoff, the pattern of harvesting (thinning and clearcut) and re-establishment should be planned so only a proportion of any larger catchment is affected in any year.

Research Provider: Forsci Pty Ltd
Improving the accuracy and utility of life cycle assessments in Australian agriculture

Over the past 10 years, incorporating the principles of sustainability at every point in a product or service’s supply chain has become more common.

Companies that use Australian agricultural products have to incorporate the environmental impact of these products when measuring their impact on the environment. The AusAgLCI project aimed to establish a life cycle inventory database for Australian agriculture to ensure producers are acting in a sustainable and responsible manner, and identify where potential improvements in a product’s life cycle.

AusAgLCI was developed primarily for software providers, who can incorporate the updated inventory data to deliver more accurate environmental assessments on any product or services that uses Australian agricultural products. Research and development corporations, environmental performance assessment businesses, policy groups and governments will also benefit from the project.

By taking into account specific regional conditions, AusAgLCI addresses a problem with existing life cycle analyses that had, at times, relied on overseas data that did not reflect the differences in international management systems, climate, soils and vegetation.

The accuracy of life cycle analysis is likely to improve using data representative of Australia’s farming practices. In addition, the AusAgLCI:

- eliminates the duplication that occurs when each industry or supply chain undertakes separate life cycle analyses
- provides environmental impact data required by certain markets (such as in EU biofuel markets)
- provides the data to give credibility to businesses that market their products with environmental and sustainable claims
- provides the potential for a range of industries unfamiliar with farming systems to use life cycle assessments as it provides comprehensive life cycle data on food and fibre production.

AusAgLCI consolidated about 180 life cycle inventories in cotton, grains, horticulture and livestock feeds, with coverage varying for each group. Forest and wood products, while not specifically reported in the AusAgLCI project, have a compatible LCI, available to researchers under an FWPA licencing agreement.

Another activity within this project was the development of an agreed reporting metric for water use in agricultural production systems. A new ISO standard 14046 – Environmental Management – Water Footprint – Principles, Requirements and Guidelines will be published later in 2014. This standard sets the framework under which future water use impact studies should be reported.

**Research Provider:**
Rural Industries R&D Corporation
PGD183-0910: Managing gene flow from *Eucalyptus globulus* plantations

**Measurement and mitigation of genetic contamination from Eucalyptus plantations to native forests**

Part of environmental sustainability is the protection of the genetic integrity of local tree species from trees growing in nearby populations. Genetic contamination through hybridisation (cross-pollination) is one of the main ways plantation species can affect the genetic integrity of neighbouring native forests.

*Eucalyptus globulus* dominates Australian hardwood plantations, with about 538,000 hectares in the ground. These plantations are growing mainly outside the natural range of the species and could potentially pose a genetic risk to native eucalypts growing nearby.

In essence there are two main risks. The first is that plantation trees will breed with trees of the same species growing in neighbouring forests. The concern is that genes from the plantation trees may spread into natural populations and cause changes to their genetic and physical characteristics. The second risk is that plantation trees will hybridise with trees of a different species in neighbouring forests. The consequences of such hybridisation would be similar to where the same species is involved, except that different species are more genetically distinct, so the genetic and subsequent physical changes are likely to be larger and have more significant flow-on effects for the native forest. The chance of successful hybridisation decreases between more distantly related species and although species from the same group can often form hybrids, hybridisation is not possible between species from different groups.

In Australia 48% of *E. globulus* plantations are growing beside potentially cross-compatible native eucalpt species. Research is currently investigating where *E. globulus* plantations pose a significant genetic risk to their neighbouring species and how that risk should be managed.

Understanding how pollen moves in the landscape will be important for assessing which forests are most at risk of genetic contamination from *E. globulus* plantations. Small forest patches and trees on the edges of patches were most at risk of hybridisation from common plantation neighbour *E. ovata* and, in the future, could be the focus of management strategies to limit genetic contamination.

The level of hybrid establishment in the wild and the ability of hybrids to survive were also found to be important barriers to genetic contamination. The results suggest that edge plantings or leaving low-risk native forest (e.g. non-cross compatible native species) around plantations will be more successful management tools than buffer zones without trees. In addition, revegetation strategies should avoid collecting seed close to plantations boundaries and from small embedded patches.

Current Australian bushfire management practices may be limiting the spread of pure-bred *E. globulus* seedlings (wildlings) and reducing the likelihood of wilding spread. However, the Australian plantation estate is young and if future management changes, wildlings could become a problem, meaning ongoing monitoring is warranted.

The picture emerging from this research is that although the potential for genetic contamination is real, the natural barriers to hybridisation and potential mitigation techniques mean that the risk is manageable.

University of Tasmania
LOOKING AHEAD

During 2014–15, FWPA’s research and development activities will be directed to:

› Increase the acceptance and accuracy of periodic benefit-cost analyses (BCA) by industry and government stakeholders, as measured from stakeholder feedback
› Increase industry and researcher engagement with FWPA’s R&D investment systems (i.e. investment priorities and plans), as measured by level of consultation, web downloads and fewer ad hoc research requests
› Increase industry and government awareness of iconic or key R&D projects, as measured by periodic opinion surveys
› Increase the amount of additional industry or Government R&D funding (non-levy and matching) that is invested or co-invested using FWPA’s systems, as measured by annual reporting
› Deliver priority projects to produce R&D outputs aligned to member and levy payer needs and expectations, as measured by percentage completion of active investment plans
› Increase industry participation and support for FWPA technology transfer activities, as measured through event attendance, website activity and technology adoption surveys.

Activities to achieve these objectives will include:

› Delivery of priority projects to produce R&D outputs aligned to member and levy payer needs and expectations
› Increase industry and researcher engagement with FWPA’s R&D investment systems (i.e. investment priorities and plans), as measured by level of consultation, web downloads and fewer ad hoc research requests
› Increase the acceptance and accuracy of periodic benefit-cost analyses (BCA) by industry and government stakeholders, as measured from stakeholder feedback
› Increase industry adoption and government awareness of iconic or ‘hero’ R&D project outcomes, as measured by periodic opinion surveys
› Increase the amount of additional industry or Government R&D funding (non-levy and matching) that is invested or co-invested using FWPA’s systems.
PROGRAM 3: Capacity and education

Objectives
Stakeholder benefits
Background
Key activities
Looking ahead
PROGRAM 3: Capacity and education

Objectives

Increase the industry’s capacity and capability through the effective technical transfer of R&D findings and focused education activities that support the industry and its products.

Stakeholder benefits

FWPA’s investments in this strategy are required to deliver clear benefits to stakeholders (members, levy payers and the Australian Government) through:

› Increasing the adoption of R&D findings
› The development and uptake of new and existing industry-oriented educational programs or resources.

Background

This program aims to increase the industry’s capacity and capability by investing in technical transfer of R&D findings and targeted educational activities.

In 2013/14, FWPA continued to build on initiatives launched in response to two independent reviews that highlighted the need for FWPA to play a greater role in technology transfer and education.

These initiatives include the R&DWorks newsletter and seminar series, the ForWood corporate newsletter, the FWPA website and the Forest Learning and school curriculum initiatives. Following feedback from the Industry Summit, the Growing Careers program was scaled back and moved to a maintenance regime.

FWPA is a member and the major funder of the National Forum of the Research, Development and Extension (RD&E) Strategy, which was developed under the auspices of the National Primary Industries RD&E Framework. The Forum is developing national RD&E priorities for the sector and mechanisms for improved coordination.

Key activities

TECHNOLOGY TRANSFER

Through its R&D investment plans, FWPA oversees the communication of industry best practice and the creation of new technologies. The benefit of such activities is only realised when adopted by the industry in its commercial practices.

A key factor in all R&D projects is a requirement for the research provider to have an active program of engagement with industry and disseminate the R&D findings through appropriate mechanisms.

Effectively communicating R&D outcomes to industry stakeholders and the research community is essential to encourage the adoption of best practices, greater knowledge adoption and technology uptake, and more rapid achievement of industry goals.

FWPA communicates research findings to industry through a wide range of channels including:

› The new FWPA website’s sophisticated research report search functionality, report and video capabilities
› FWPA newsletters – the corporate publication, ForWood, and the R&D-based monthly newsletter, R&DWorks
› The R&DWorks online webinar program
› Industry press articles
› Advisory group presentations
› Media releases
› DVDs and memory sticks
› Executive summaries
› Other FWPA channels, such as news items on the WoodSolutions website and social media.

These activities increase awareness of research results and encourage their adoption by the industry.
## Case study

### R&DWORKS WEBINARS

FWPA’s successful R&DWorks webinar program included presentations covering a wide range of topics of interest to different sectors in the forest and wood industries. It is important that industry leaders are continually made aware of R&D findings and opportunities for business improvement across all sectors of the industry.

Each webinar, presented by the researcher, comprises a 40-minute presentation, followed by 15-20 minutes of questions and discussion. The webinars cover a range of issues and provide opportunities for senior executives and key decision makers to be informed about new technologies and processes for the forest and wood products sector. It also gives audience members an opportunity to interact with researchers, helping strengthen bonds between the industry and research communities.

It is a cost-effective way to provide up-to-date and informative R&D outcomes. Presenters and participants from across the country and overseas can more readily be informed. The interactive presentations are recorded and available on the FWPA website at any time.

BUILDING STRONGER VALUE CHAINS SEMINAR

The ‘Building Stronger Value Chains’ seminar, held in conjunction with the 2012/13 AGM, covered a wide range of topics, with agreement that collaboration should be high on the industry’s agenda.

Organised jointly by FWPA, the Australian Timber Importers Federation and TABMA Australia, the event attracted more than 130 delegates from all states, New Zealand, Canada and Chile. Attendees included the Parliamentary Secretary for Agriculture Senator Richard Colbeck and NSW Primary Industries Minister Katrina Hodgkinson.

Senator Colbeck re-stated the Australian Government’s commitment to support research and development in the industry, with an investment of $15 million to make the sector more productive and competitive. He also said that industry would also benefit from the government’s $100 million increase in rural R&D development expenditure.

Trade Commissioner David Ingham noted that Australia’s investment in forest research was dwarfed by Canada’s expenditure on R&D. Canada’s forest, paper and wood products sector alone invested more than $220 million in R&D last year.

Answering a post-event survey, 83% of respondents rated the event as ‘very good’ or ‘excellent’.

MELBOURNE HARDWOOD FORUM

In October, key hardwood industry stakeholders met in an open forum in Melbourne where they discussed the importance of industry providing feedback, the role of FWPA and research projects and the implementation of a hardwood sector statistics resource.

The main points addressed were:

› What does the hardwood sector want?
› What is the best way to refine generic industry platforms?
› The need for – and importance of – feedback from industry participants.

Jim Houghton, FWPA’s statistics and economics manager, addressed the forum and talked about the potential value of collecting and analysing industry statistics from this sector. Attendees
agreed to provide two years of historical data to populate and trial a data tool.

Marco Lausberg from the Solid Wood Innovation (SWI) research consortium provided updates of its projects, highlighting technologies that have been developed by SWI researchers that are relevant to the hardwood processing sector.

The forum concluded with a shared agreement that more collaboration and engagement within the sector is a goal that will benefit all stakeholders.

EDUCATION

The ForestLearning program focuses on embedding forestry and wood product topics into the national school curriculum and providing relevant resources for teachers, enabling them to successfully integrate forestry and wood product information into their classroom teaching.

The program is developed and implemented in three phases:

- Now entering its fourth year of operation, the Forestlearning.edu.au program provides forest-related lesson plans, fact sheets, videos, online games and posters to primary and secondary teachers via a one-stop-shop portal developed in consultation with the Australian Forest Education Alliance (AFEA).

  AFEA is made up of Forests NSW, Sustainable Forestry Program, Southern Cross University, PIRSA Forestry, Forest Education Foundation, Australia Forest Products Association, Forest Products Commission WA, Vic Forests and Forest and Wood Products Australia.

  The group has coordinated a marketing and communications program to reach primary and secondary teachers across Australia that includes e-newsletters, teacher associations networking, event marketing and school visits.

  The program has been working closely with the national school curriculum to help ensure that forestry and wood products are being taught at every level of primary and secondary school with the aim of increasing:

  - Knowledge and understanding of the industry among students and teachers
  - Awareness of the environmental advantages of timber products
  - Social licence to operate, driven by community support
  - Desirability of the industry as a career choice.

  The focus has been on the core subjects of science, geography and technology as well as the sustainability cross-curriculum subject.

  FORESTLEARNING WEBSITE

  Awareness of Forestlearning.edu.au and the program continues to grow and the website has attracted nearly 62,000 unique visitors, an increase of over 105% from last year, viewing 106,500 pages, an increase of 45% from last year.
FORESTLEARNING PLANNING SESSION

Contributors to ForestLearning gathered at Cumberland State Forest (NSW) for a planning session in July. Attendees included Forestry Corporation NSW, Forest Education Foundation, VicForest (webinar), Forest Products Commission WA (webinar), WA Department of Environment and Conservation (webinar), FWPA, Planet Ark, Private Forestry Service Queensland and Primary Industries Education Foundation.

The group discussed outcomes for the past 12 months and key learnings from partners including PEIF and Planet Ark in reaching schools and teachers. Outcomes for the day included:

- Reviewing existing resources on site and removing out of date material
- Reviewing current material and developing an up-dated gap analysis of material based on the new curriculum
- Developing the specific curriculum links to each of the current resources
- Updating search functionality on website to include State and Curriculum search links
- Investigating opportunities to develop new materials as a group.

RESOURCES DEVELOPMENT RESEARCH PROJECT

In the 2013 school year, ForestLearning undertook a resource development research project to test and evaluate existing and new teaching resources across three core subject areas – science, geography and technology. The pilot reached more than 100 high school teachers, whose feedback and input will help us to develop relevant and useful teaching resources in the future.

Early results indicate that:

- 75% of teachers believe that active forest management and use of wood products helps in the fight against climate change
- Teachers would like to receive guided lesson plans, videos and interactive online games/ quizzes to help them deliver forest and wood product theory
- DVD, PowerPoint and multimedia are the most commonly used technologies in the classroom for lessons
- Even though 27% of teachers said they had heard of ForestLearning.edu.au before taking part in the research, the main suggestion for improving the site was building awareness that it exists.

Overall, the results were positive. Most of the resources were rated ‘good’ or ‘excellent’ and commentary from teachers included some useful and constructive feedback.
SCHOLARSHIPS AND SKILLS

As of 30 June, FWPA funding continued for the remaining contracted five PhD scholarships at various stages of progress, a reduction from eight.

No full scholarships were awarded in the 2013/14 financial year, in line with the FWPA’s Board decision to close funding to various investment priorities. In the course of the year, three students completed their postgraduate studies.

Matthew Larcombe submitted his PhD thesis, ‘Managing gene flow from Eucalyptus globulus plantations’ (PGD183-0910). Matthew studied Blue Gum, which is widely grown in plantations outside its natural range and often close to potentially cross-compatible native eucalypts. The University of Tasmania study investigated whether these plantations posed a genetic risk to these native eucalypts through hybridisation.

At the University of New England, John Moore completed his thesis, ‘Monitoring timber bridge-beams for structural health’ (PGD137-0809). John’s work included the development of alternative methods of monitoring and assessing individual girders. Testing and monitoring the carrying capacity of timber bridge beams and load stress produced by traffic enabled improved determination of timber beam service life.

David Bylund, of the University of Western Australia, completed his PhD thesis, ‘Timber housing in Australia: Using value-added wood products, alternative framing and structural systems, prefabrication and design from the Scandinavian timber housing industry in the Australian context’ (PGD148-0809).

At year’s end, five PhD scholarships were still being undertaken, covering a wide range of topics of future benefit to the sector.

SPONSORSHIPS

Sponsorship of selected technical conferences and support of peer review and discussion of scientific research enables FWPA to facilitate the exchange of knowledge and flow of information in the forest and wood products industry:

- **Plantations Productivity Symposium**
  The symposium provided forestry professionals with practical information about how to leverage their tree assets by implementing proven and emerging research findings on-ground, and measuring productivity gains and return on investment.

- **Annual sponsorship of FIEA**
  Our sponsorship assists FIEA to bring a wide range of technology events to Australasian forestry and wood products companies each year.
LOOKING AHEAD

During 2014–15, FWPA’s activities under the Capacity and Education program will be directed to:

› Increasing industry and government support of education activities through recorded program participation levels and stakeholder surveys

› Increasing the uptake of education program activities by target user groups through tracking of numbers of applicants, web activity and teacher requests for supporting materials.
PROGRAM 4

Standards coordination

Objective
Stakeholder benefits
Background
Key activities
Looking ahead
Program 4: Standards coordination

Objective

To coordinate the industry’s management of consensus-based Standards and building Codes to maintain or improve market acceptance of the industry’s products.

Stakeholder benefits

FWPA’s investments in this strategy are required to:

› Improve market access and/or reduce barriers to the use of wood products
› Increase the understanding and adoption of relevant Standards and Codes within the industry and building professionals
› Reduce the cost of delivery of standards development.

Background

Australia’s national timber product Standards and linkages with building Codes and Standards have evolved in an ad hoc fashion, incorporating a range of inputs from industry, research agencies and professional associations.

Since FWPA’s standards coordination program began in 2009, its aim has been to increase the use of wood-based products through efficiently and effectively developing and maintaining key Standards (except forest management Standards), Codes and handbooks that support the manufacture and use of timber and wood products.

The industry has more than 260 Australian Standard documents (Standards, supplements, handbooks and amendments), including around 150 Standards relating to timber and wood products, and is exposed to nearly 80 building Standards that influence the use of timber and wood products. In addition, many building regulations also reference Standards that affect the use of timber and wood products.

FWPA is taking a strategic and coordinated leadership role in the future development of industry Codes and Standards. This is being done in close consultation with FWPA members who expressed interest in being involved with the standards network.

FWPA has continued to focus on expanding the market for timber products beyond residential construction and to enhance confidence in the use of industry’s products by building professionals. To facilitate this, close working relationships have been maintained with Standards Australia and the Australian Buildings Codes Board.
Key activities

Activities in this program are undertaken on the basis that they will contribute to one or more of the following objectives:

› Increasing industry and stakeholder participation in FWPA Standards activities
› Reducing the number of Australian Standards and Codes that directly affect the industry and its access to markets
› Increasing levels of support (or lack of dissent) on proposed changes to Australian Standards and building Codes
› Increasing the uptake and use of Standards.

STANDARDS DEVELOPMENT REVIEW

In consultation with FWPA, Standards Australia has reviewed its committee structures following feedback on a proposed restructure from stakeholders, including timber industry representatives, aligned stakeholders and committee nominating organisations.

Key drivers for this review are the declining human and financial resources available to the timber industry for developing, reviewing and updating Australian Standards.

Following the review, Standards Australia organised a Timber Standards Development Forum to outline a proposed restructure from the existing eight timber (TM) committees to three, to broadly align with the International Standards Organisation (ISO) timber Standards committees. Standards Australia is represented on ISO committees that are filled by TM committee representatives.

Standards Australia’s Management Group approved the proposed restructure, as shown in the chart below.
BACKGROUND AND GUIDANCE DOCUMENT AS/NZS 1748 SERIES 2011 (INCLUDING AS/NZS 4490:2011)

This document was developed to provide guidance and technical support to the industry and general users of the Australian / New Zealand Standards:

These Standards cover all methods (e.g. visual, mechanical) of stress-grading structural timber and rely on principles outlined in this document for proving the performance of the stress-graded structural product.

The background and guidance document provides a step-through approach required for qualification and verification as well as the statistical concepts behind the process.

Download a copy of the Background and Guidance Document here.

AMENDMENTS THAT ALLOW TIMBER FRAMED CONSTRUCTION IN CLASS 3 BUILDINGS

The culmination of three years’ work, orchestrated by FWPA, the Australian Building Codes Board approved amendments enabling timber framing to be used on a far wider range of projects. The new regulations now permit the use of fire- and acoustic-rated timber-framed construction systems for three-storey, Class 3 buildings (e.g. hotels, motels and hostels). This broadens the market for timber. The amendment applied from May 2014.

Read the report here.

UNDER DEVELOPMENT: DISCUSSION PAPER – PRESERVATIVE TREATED TIMBER AND DESIGN FOR DURABILITY

For many years, industry has been increasingly concerned about market perceptions of timber's in-service life and designing for durability. As part of addressing this concern, the suitability of Australian Standard AS1604: Specification for preservative treatment has been discussed with key industry stakeholders and users. Materials covered include treated and untreated, natural durable timber.

The AS 1604: Parts 1-5 series of Standards was revised in 2012. Typically, these Standards have required revision when new or altered preservative formulations are introduced. The Standards have a direct de facto regulatory role: it is difficult to effectively market such products in Australia if they are not accepted and included in these documents. This is more relevant now with the removal of the NSW Timber Marketing Act 1977 (TMA).

This project aims to produce a Discussion Paper as a catalyst for resolving industry concerns, both marketing and technical, and formulating an acceptable approach for Standards development that will meet industry and consumer needs.

BD-074 TERMITE MANAGEMENT

A revision of AS 3660 Part 1 New building work and Part 3 Assessment criteria for termite management systems is being undertaken. Matters that have required review include a new clause requiring system components to achieve a service life of not less than 50 years. FWPA’s representative raised this as an issue for timber industry producers of treated timber products where the current warranty is for 25 years. This matter, as well as others, is being discussed at BD-074 Committee level.
BUILDING CODE OF AUSTRALIA (BCA) – NON-COMBUSTIBILITY REQUIREMENTS

Work has continued on addressing the non-combustibility requirements in the National Construction Code (NCC), in particular the Building Code of Australia (BCA) – Volume 1, which covers building classes other than Class 1 (houses) and 10 (garages, sheds) as identified in FWPA’s Strategy Plan.

As part of this work, two key local activities have been undertaken:

› State-based face-to-face discussions with fire authorities
› Australasian Fire and Emergency Service Authorities Council (AFAC) Workshop presentations.

Feedback from the various fire authorities regarding tall massive timber (e.g. cross laminated timber, EXPAN) buildings has been positive. Issues raised included service penetration detailing, egress provisions, fire resistance provisions and fires during construction. FWPA is working through the various items.

AS 1720-X NAILPLATED TIMBER ROOF TRUSSES

A Timber Truss Design Standard has now been completed, following an involved process of drafting and meetings with key stakeholders. The development of the draft was as a direct result of a Coroner’s finding into a large commercial truss failure and its development has been supported by FWPA, Standards Australia and major nailplate manufacturing (truss design) companies.

The completed draft has been submitted to Standards Australia for consideration by the new TM-010 Timber Structures and Framing Committee, which will meet in July 2015.

FWPA – Program Manager
LOOKING AHEAD

During 2014–15, FWPA’s standards coordination activities will be directed to:

› Increasing industry stakeholder participation in FWPA Standards activities through tracking of formal industry input into the Standards Reference Group (SRG)

› Reducing the number of Standards and Codes and associated maintenance costs affecting the industry, as tracked by reference group

› Increasing the awareness and uptake of Standards by industry stakeholders, as measured by levels of participation at training sessions and purchases of revised standards

› Increasing commercial market access for timber products.

Activities to achieve these objectives will include:

› Assisting industry to transition to the new Standards Australia Committee structure

› Working closely with Standards Australia to ensure the cost-effective delivery of Standards

› Working with the SRG to identify priority amendments/development of industry’s Standards

› Securing co-funding and resources from industry groups to progress Standards development where appropriate

› Effectively communicating activities to the industry via email, newsletters and the FWPA website

› Promoting knowledge transfer to industry through workshops and industry presentations

› Addressing fire-related measures within the Building Code of Australia.
PROGRAM 5: Statistics and economics program coordination

Objective

Stakeholder benefits

Background

Key activities

Data aggregation service

Looking ahead
**Program 5: Statistics and economics program coordination**

**Objective**

To coordinate and manage the provision of relevant, insightful industry statistics and economic analysis to deliver market intelligence that industry can use to make more informed decisions.

**Stakeholder benefits**

FWPA’s investments in this strategy will deliver benefits to stakeholders including:

- Improved industry competitiveness through better company-level knowledge of production, trade and operational costs
- Increased industry capacity and capability to facilitate expansion through a more extensive and reliable knowledge base.

**Background**

This is a new program established to address industry and key stakeholder concerns regarding the timeliness and accuracy of information available to the sector. In addition, the consultation process identified gaps in the data.

Much of the information needed to address these issues resides at the individual company level. The challenge is to aggregate this information in a confidential manner and then provide it to participants in the following period (month).

Improving the baseline data that is available will also complement the work undertaken by ABARES in producing the six-monthly Forest and Wood Products Statistics. It is expected the monthly data collected and aggregated by this program will be used to support ABARES broader data collection and verification process.

**Key activities**

The program focuses on aggregating and generating data to support decision making in two key areas:

**Information to support/improve commercial operations**

- Production measures
- Trade measures
- Market activity measures
- Operational competitiveness.

**Information to support investment decisions**

- Forest base
- Local and regional wood flows
- Market trends
- Emerging products.

Arrangements have been made with ABARES to upload import and export data for key industry products by major trading countries on a monthly basis. An interactive service is being developed for the website to provide data for the general public, wider industry and FWPA Members.
Data aggregation service

FWPA SOFTWOOD TIMBER DATA SERIES

The Softwood Timber Series that has been managed as part of the new Statistics and Economics Strategy program since May 2013 is being expanded to include data from more saw mills.

The series currently represents some 70% of total softwood sawn timber sales, collating information on 45 detailed product codes, with data being made available through the FWPA website. Public domain information is available on seven aggregate product groupings. Registered participants can access information on 11 more product groupings. Companies contributing data have access to aggregate information on all 45 product codes.

During the year, 18 softwood sawmills in Queensland, NSW, Victoria and SA were visited to encourage their participation in an expanded Softwood Timber Survey.

The response has generally been positive and it is expected that as new mills continue to come on board the coverage of the survey will exceed 90% of Industry monthly sales.

HARDWOOD TIMBER SERIES INITIATIVE

FWPA is also pursuing opportunities for data aggregation in the hardwood sawmilling sector. Discussions about establishing a Hardwood Timber Series have commenced with some ten sawmillers. The initial task has been determining a range of products that cover the main output of the Hardwood Sector. Agreement has now been reached on the products to be covered including; decorative (appearance and joinery, flooring, parquetry), structural (green and dry, laminated and finger jointed, rounds, engineered hardwoods), outdoor (decking, fencing, landscaping) and industrial.

Information is collected on monthly sales volume and weighted average sales value. The confidential data portal has now been developed and participating companies have commenced providing 24 months of historic data and ongoing monthly data. Initial coverage is expected to represent 50-60% of industry sales.

DATA DASHBOARD

To provide industry and policy makers with current information on key drivers the FWPA has established a data dashboard. The aim of the new dashboard is to provide industry decision makers with a central point of access to a range of public domain data, in addition to proprietary data that FWPA is aggregating on behalf of industry. By being able to view a range of easily accessible information, trends become easier to identify. In addition, to complement the extensive trade data, a system of data flags has been created to identify significant monthly variations.

Further information is available for the general public here

More detailed industry information is available here
LOOKING AHEAD

During 2014–15, FWPA’s statistics and economic program coordination activities will be directed to:

› Foster the contribution of industry-generated data to the FWPA statistics program as measured by the percentage of national sales and production volumes

› Increase industry and stakeholder awareness and utilisation of FWPA-generated products as tracked by web downloads and third-party citations.

Activities to achieve these objectives will include:

**FWPA Softwood Sales Value Series**

A data portal is being developed to aggregate weighted average price information for a range of softwood timber products. A data template on suitable products and an appropriate methodology has been agreed and it is expected this service will be launched during the 2014/15 year.

**FWPA Softwood Performance Benchmarking**

The opportunity to aggregate performance benchmarking data for softwood sawmills is being pursued. A working group of three processor representatives has been formed and is presently identifying critical measures and addressing methodological issues associated with measurement. It is expected a pilot project will be launched during the 2014/15 year.

**Growers Data Series**

Discussions have begun with forest growers about the potential to improve the information which is available on monthly forest production. Historically, six-monthly information has been aggregated for some log products from a set sample of forest. The current initiative is aimed at expanding the forest coverage, updating the categories of logs tracked and aggregating information on a monthly basis.
FINANCIAL STATEMENTS
AND CORPORATE GOVERNANCE

Directors’ report
Auditor’s independence declaration
Statement of profit or loss and other comprehensive income
Statement of financial position
Statement of changes in equity
Statement of cash flows
Notes to the financial statements
Directors’ declaration
Independent audit report
Directors present this report on the Company for the financial year ended 30 June 2014.

Directors

During the reporting period, seven non-executive directors served on the Board as well as the Managing Director. Six directors (including the Managing Director) were Directors of the Company for the full financial year.

Election of directors

According to the Company Constitution, FWPA’s Board shall comprise between five and nine directors (including the Managing Director) at least two of whom are independent directors. After the first annual general meeting, directors, with the exception of the Managing Director who is an employee of the Company, are appointed on a rotational basis by the Company’s voting members at the annual general meeting. The appointments are for terms of three years with a maximum of three consecutive terms.

Board of directors

The names of each person who has been a director during the year and to the date of this report are:

- Mr Ron Adams
- Mr Vince Erasmus
- Mr John Simon
- Mr Evan Rolley
- Mr John McNamara
- Mr Craig Taylor (appointed 11 October 2013)
- Dr Michele Allan (until 11 October 2013)
- Mr Ric Sinclair

Directors have been in office since the start of the financial year to the date of this report unless otherwise stated.
Information on directors

CHAIRMAN AND NON-EXECUTIVE DIRECTOR

Mr Ron Adams
Managing Director of Wespine Industries Pty Ltd, Mr Adams is also President of Forest Industries Federation of WA and a Trustee of J.W. Gottstein Memorial Trust. He was formerly a Director of the National Association of Forest Industries (NAFI) and a member of the WA Minister for Forestry’s Timber Plantation Advisory Group and The Australian Plantation Products and Paper Industry Council (A3P). He holds an associateship in Mechanical Engineering, is a graduate of the Harvard Business School International Advanced Management Programme and a Foundation Fellow of the Australian Institute of Company Directors.

Board responsibilities: Chair of the Remuneration and HR Committee.

DEPUTY CHAIRMAN AND NON-EXECUTIVE DIRECTOR

Mr John Simon
John Simon is CEO of Simmonds Lumber Group and has more than 25 years’ experience in the Australian wood products sector. After completing his master’s in timber engineering, Mr Simon worked in timber research at the Council for Scientific and Industrial Research (CSIR) in South Africa. Since arriving in Australia 28 years ago, he has been the Managing Director of Sterlands, the largest timber frame and truss producer in Australia; CEO of national timber distributor Pine Solutions; Managing Director of merchant and retailer Hudson Building Supplies; and Chairman of the Timber Development Association for 10 years. Currently he is a Director of the Australian Timber Importers Federation, Director of the Timber Development Association and is a member of the Housing Industry Association’s Manufacturers and Suppliers Council. He is also a Fellow of the Australian Institute of Company Directors.

Board responsibilities: Member of Remuneration and HR Committee, and Chair of the Market Access and Development Advisory Group.

NON-EXECUTIVE DIRECTOR

Mr John McNamara
John McNamara is CEO of Parkside Group Milling and currently holds a number of directorships. Since beginning his career as a mechanical engineering cadet for BHP in Wollongong, Mr McNamara has accrued more than 30 years experience in the forest and forest products industry, including time spent in Tasmania and in Mount Gambier as General Manager of Auspine’s Group sawmilling and wholesale distribution business. Mr McNamara is currently the CEO of Parkside Group Sawmilling businesses which specializes in Native Hardwood sawmilling and value add processing in Queensland. Previously, Mr McNamara was the Managing Director of Hyne Timber, a role he held for 18 years.

Board responsibilities: Chair of the Audit and Finance Committee and Member of Remuneration and HR Committee (from 15 May 2014).

NON-EXECUTIVE DIRECTOR

Mr Evan Rolley
Mr Rolley was previously the Chief Commissioner for Forests, then Managing Director of Forestry Tasmania and, more recently, Secretary of Premier and Cabinet in Tasmania. He is currently Executive Director of Ta Ann Tasmania and a Director of Tasports, and operates a successful farming business, Huon Valley Vineyards. He holds qualifications in forestry and economics.

Board responsibilities: Chair of the Sustainability and Resources Advisory Group.
NON-EXECUTIVE DIRECTOR
Mr Vince Erasmus
Mr Erasmus is an experienced industry participant with extensive skills and expertise in the management of softwood and hardwood operations internationally and has broad experience in the solid wood-processing environment. He is a former Director of the Forest Stewardship Council (FSC) Australia, the National Association of Forest Industries (NAFI), Australian Forest Products Association (AFPA) and the World Forestry Center in Portland, Oregon.

Board responsibilities: Chair of the Wood Products Advisory Group and Member of the Audit and Finance Committee.

NON-EXECUTIVE DIRECTOR
(FROM OCTOBER 2013)
Mr Craig Taylor
Mr Taylor is Director and Principal of the Fifth Estate, a Sydney-based consulting firm that works at high corporate levels to determine strategy and develop business. A tertiary qualified forester, he was Vice President and Associate Principal for Jaakko Pöyry Consulting, running the Asia Pacific groups solid wood consulting group between 1997 and 2003.

Mr Taylor has held executive roles with the State Forests of New South Wales and Boral Timber and has wide experience in harvesting and log yard operations, production, planning and sales. He has published and presented internationally in the areas of hardwood plantations for high-value wood products, woodchip supply, demand and markets, plantations and water, regional industry development, forest products markets, restructuring the Australian wood panels industry, plantation investment and industry development strategies.

Board Responsibilities: Member of the Audit and Finance Committee (from 15 May 2014).

NON-EXECUTIVE DIRECTOR
(UNTIL OCTOBER 2013)
Dr Michele Allan
Dr Allan is a non-executive director of a number of companies including Cooperative Research Centre Hearing, Food Standards Australia and New Zealand, Grape and Wine Research and Development Corporation, Meat and Livestock Australia and Ruralco Holdings Ltd. She is chair and non-executive director of Grains and Legumes Nutrition Council and William Angliss Institute, as well as an independent non-executive director of Birchip Cropping Group and New Zealand Food Innovation Network Company. She is also a Board adviser to Bread Solutions and a member of the Clean Technology Investment Committee. Dr Allan holds a Bachelor of Applied Science, Master of Management (Technology), Doctor of Business Administration, Master of Commercial Law, and is a Graduate and Fellow of the Australian Institute of Company Directors.

Board Responsibilities: Chair of the Audit and Finance Committee and Member of Remuneration and HR Committee.

MANAGING DIRECTOR
Mr Ric Sinclair
Mr Sinclair was appointed to the role of managing director of FWPA in June 2008. He is also a trustee of the J.W. Gottstein Memorial Trust. Previously, Mr Sinclair spent seven years in the grocery and food industry where he worked in operations, corporate finance and strategy roles. Mr Sinclair has held operations, marketing and strategy roles at Origin Energy, KH Foods, Chiquita Brands and Amcor/PaperlinX. He holds tertiary qualifications in forestry and a Master of Business Administration.

Board Responsibilities: Invited guest to the Audit and Finance Committee.
Board committees

Board committees ensure appropriate management and review of company operations, and make certain that investments are adequately evaluated and deliver outcomes to Company Members and other stakeholders. The Board committees are: Audit and Finance Committee and Remuneration and Human Resources Committee. All committee members listed below were members of the committee for the entire year, unless otherwise specified.

AUDIT AND FINANCE COMMITTEE (A&FC)

Members:
Mr John McNamara (Chair) (from 15 May 2014)
Dr Michele Allan (Chair) (until October 2013)
Mr Craig Taylor (from 15 May 2014)
Mr Vince Erasmus

Invited guests:
Mr Ric Sinclair
Mr Jason See

The key tasks of the Audit and Finance Committee are to:

› Ensure prudent management of the Company’s finances; ensure the Board makes informed decisions regarding the Company’s overall expenditures; ensure activities approved by the Board are consistent with Australian law relating to prudent financial management; and provide a general overview of the Company’s financial management.

› Liaise with FWPA’s auditors; review the adequacy of internal controls and of compliance with relevant laws, regulations, policies and procedures; report to the Board on the adequacy of audit procedures; and promote accurate, high quality and timely disclosure of financial and other information to the Board and key stakeholders.

REMUNERATION AND HUMAN RESOURCES COMMITTEE (R&HRC)

Members:
Mr Ron Adams (Chair)
Mr John Simon
Dr Michele Allan (until October 2013)
Mr John McNamara (from 15 May 2014)
Ms Lesley Austin (Secretary)

The secretary is an independent and external consultant.

The key tasks of the Remuneration and Human Resources Committee are to:

› Ensure that the Company’s remuneration and human resources policies and systems support the Board’s desired organisational culture and capacity.

› Approve procedures and systems for the Company relating to staff and director remuneration, human resources and OH&S that are in accordance with agreed Board policies and directions.

› Approve annual adjustments for the remuneration of the managing director and the managing director’s direct reports.

› Approve annual performance targets and assessment of performance against the targets.
Board meetings

During the reporting period, the Board held six meetings. Details of attendance by individual Board members are provided below.

Principal activities

The principal activities of the FWPA during the financial year comprised:

› Providing research and development to support the Australian forest and wood products industry; and

› Providing domestic marketing and promotion services to the Australian forest and wood products industry.

Significant changes in state of affairs

There have been no significant changes in the nature of these operations during the period.

Objectives

› Invests in outcome-oriented research and development (R&D) and encourages the adoption of R&D findings;

› Manages the generic promotion of the forest and wood products sector;

› Plays a role in developing the capacity and skills of people in the industry, including the adoption of technologies;

› Coordinates the sector's approach to timber standards and building codes; and

› Coordinates the collection and analysis of reporting of industry statistics and economic measures on behalf of its members and levy payers.
Strategies

› Promote the benefits and usage of forests and wood products, in accord with changing community attitudes, environmental awareness, and market trends (Generic Industry Promotion);

› Invest in and coordinate research and development to improve the industry’s competitiveness, inform its climate change response, enhance investment, increase usage, and ensure the sustainability of forests, wood products and services (R&D Investments);

› Grow the industry’s capacity and capability through effective technical transfer and focused education activities that support the industry and its products (Tech Transfer and Education);

› Coordinate the industry’s management of consensus-based standards and building codes to maintain or improve market acceptance of the industry’s products (Standards Coordination); and

› Coordinate the collection and analysis of key industry statistics and other economic analyses to support commercial decision-making and policy development within the sector (Statistics and Economics Coordination).

Results of operations

The operating result for the financial year to 30 June 2014 was an operating surplus of $485,088 (2013: $2,093 surplus).

Significant events after the balance date

No matters or circumstances have arisen since the end of the financial year which in the opinion of the Directors have significantly affected or are likely to affect significantly the operations of the company, the results of those operations, or the state of affairs of the company in subsequent financial years.

Code of conduct

The FWPA Code of Conduct requires the Board and all staff to promote high standards of ethics and integrity. The language, attitudes and actions of directors, senior management and staff must reflect the principles of integrity and ethics, as well as the company’s values and culture. The Code of Conduct recognises that FWPA’s employees are vital to the fulfilment of the Company’s purpose and, consequently, the highest level of staff satisfaction, health and safety must be maintained. It also encourages directors and staff to commit to the philosophy of continuous improvement at the corporate and individual levels.

Conflict of interest and register of interests

A director must disclose an interest wherever he or she considers there is a potential perceived conflict of interest and a Declaration of Directors’ Interests is a standing agenda item for all Board meetings. This policy is consistent with Section 21 of the Corporations Act 2001.

Members’ Guarantee

The Company is limited by guarantee. If the Company is wound up, the Constitution states that each member is required to contribute a maximum of $1 each towards any outstanding obligations of the Company. At 30 June 2014 the number of members was 141.

Risk management, fraud control and business recovery

The company has risk management, business recovery and fraud control plans in place. It also maintained a human resource policy and procedures, a Corruption and Fraud Control policy, a Whistleblower policy and a policy and procedure manual.
Environmental regulation and performance

The Company is not subject to any particular or significant environmental regulation.

Auditor’s independence declaration

The lead auditor’s independence declaration for the year ended 30 June 2014 has been received and can be found on the following page.

Signed in accordance with a resolution of the Board of Directors, pursuant to Section 298(2) of the Corporations Act 2001.

Ronald Adams  Alaric Sinclair  
Director  Director  
22 August 2014  22 August 2014
AUDITOR’S INDEPENDENCE DECLARATION
under Section 307C of the Corporations Act 2001

Crowe Horwath Melbourne is a member of Crowe Horwath International, a Swiss verein. Each member of Crowe Horwath is a separate and independent legal entity. Liability limited by a scheme approved under Professional Standards Legislation other than for the acts or omission of financial services licensees.

Auditor Independence Declaration Under S307C of the Corporations Act 2001 to the Directors of Forest and Wood Products Australia Limited

I declare that, to the best of my knowledge and belief, during the year ended 30 June 2014 there has been:

1) No contraventions of the auditor independence requirements as set out in the Corporations Act 2001 in relation to the audit; and

2) No contraventions of any applicable code of professional conduct in relation to the audit.

The accompanying notes form part of these financial statements.
1 Summary of significant accounting policies

(a) GENERAL INFORMATION

The financial statements cover Forest and Wood Products Australia Limited as an individual entity. The financial statements are presented in Australian dollars, which is Forest and Wood Products Australia Limited’s functional and presentation currency.

Forest and Wood Products Australia Limited is a not-for-profit unlisted public company limited by guarantee.

The financial statements were authorised for issue, in accordance with a resolution of directors, on 22 August 2014. The directors have the power to amend and reissue the financial statements.

The principal accounting policies adopted in the preparation of the financial statements are set out below. These policies have been consistently applied to all the years presented, unless otherwise stated.

(b) NEW, REVISED OR AMENDING ACCOUNTING STANDARDS AND INTERPRETATIONS ADOPTED

The company has adopted all of the new, revised or amending Accounting Standards and Interpretations issued by the Australian Accounting Standards Board (‘AASB’) that are mandatory for the current reporting period.

Any new, revised or amending Accounting Standards or Interpretations that are not yet mandatory have not been early adopted.

Any significant impact on the accounting policies of the company from the adoption of these Accounting Standards and Interpretations are disclosed below. The adoption of these Accounting Standards and Interpretations did not have any significant impact on the financial performance or position of the company.

The following Accounting Standards and Interpretations are most relevant to the company:

AASB 1053 Application of Tiers of Australian Accounting Standards

The company has applied AASB 1053 from 1 July 2013. This standard establishes a differential financial reporting framework consisting of two tiers of reporting requirements for preparing general purpose financial statements, being Tier 1 Australian Accounting Standards and Tier 2 Australian Accounting Standards - Reduced Disclosure Requirements. The company being classed as Tier 2 continues to apply the full recognition and measurements requirements of Australian Accounting Standards with substantially reduced disclosure in accordance with AASB 2010-2 and later amending Standards, as relevant.

AASB 2010-2 Amendments to Australian Accounting Standards arising from Reduced Disclosure Requirements

The company has applied AASB 2010-2 from 1 July 2013. These amendments make numerous modifications to a range of Australian Accounting Standards and Interpretations, to introduce reduced disclosure requirements to the pronouncements for application by certain types of entities in preparing general purpose financial statements. The adoption of these amendments has significantly reduced the company’s disclosure requirements.

AASB 2011-2 Amendments to Australian Accounting Standards arising from the Trans-Tasman Convergence Project - Reduced Disclosure Requirements, AASB 2012-7 Amendments to Australian Accounting Standards arising from Reduced Disclosure Requirements and AASB 2012-11 Amendments to Australian Accounting Standards - Reduced Disclosure Requirements and Other Amendments

The company has applied AASB 2011-2, AASB 2012-7 and 2012-11 amendments from 1 July 2013, to the extent that they related to other standards already adopted by the company. These amendments make numerous modifications to a range of Australian Accounting Standards and Interpretations to significantly reduce the company’s disclosure requirements.
Notes to the Financial Statements 30 June 2014

1 Summary of significant accounting policies, cont.

AASB 13 Fair Value Measurement and AASB 2011-8 Amendments to Australian Accounting Standards arising from AASB 13

The company has applied AASB 13 and its consequential amendments from 1 July 2013. The standard provides a single robust measurement framework, with clear measurement objectives, for measuring fair value using the ‘exit price’ and provides guidance on measuring fair value when a market becomes less active. The ‘highest and best use’ approach is used to measure non-financial assets whereas liabilities are based on transfer value. The standard requires increased disclosures where fair value is used.

AASB 119 Employee Benefits (September 2011) and AASB 2011-10 Amendments to Australian Accounting Standards arising from AASB 119 (September 2011)

The company has applied AASB 119 and its consequential amendments from 1 July 2013. The standard eliminates the corridor approach for the deferral of gains and losses; streamlines the presentation of changes in assets and liabilities arising from defined benefit plans, including requiring remeasurements to be presented in other comprehensive income; and enhances the disclosure requirements for defined benefit plans. The standard also changed the definition of short-term employee benefits, from ‘due to’ to ‘expected to’ be settled within 12 months. Annual leave that is not expected to be wholly settled within 12 months is now discounted allowing for expected salary levels in the future period when the leave is expected to be taken.

AASB 2012-2 Amendments to Australian Accounting Standards - Disclosures - Offsetting Financial Assets and Financial Liabilities

The company has applied AASB 2012-2 from 1 July 2013. The amendments enhance AASB 7 ‘Financial Instruments: Disclosures’ and requires disclosure of information about rights of set-off and related arrangements, such as collateral agreements. The amendments apply to recognised financial instruments that are subject to an enforceable master netting arrangement or similar agreement. The Company has considered the impact of AASB2012-2 in the preparation of the financial statements and that there has been no change to the disclosure in these financial statements resulting from AASB 2012-2.

AASB 2012-5 Amendments to Australian Accounting Standards arising from Annual Improvements 2009-2011 Cycle

The company has applied AASB 2012-5 from 1 July 2013. The amendments affect five Australian Accounting Standards as follows: Confirmation that repeat application of AASB 1 ‘First-time Adoption of Australian Accounting Standards’ is permitted; Clarification of borrowing cost exemption in AASB 1; Clarification of the comparative information requirements when an entity provides an optional third column or is required to present a third statement of financial position in accordance with AASB 101 ‘Presentation of Financial Statements’; Clarification that servicing of equipment is covered by AASB 116 ‘Property, Plant and Equipment’, if such equipment is used for more than one period; clarification that the tax effect of distributions to holders of equity instruments and equity transaction costs in AASB 132 ‘Financial Instruments: Presentation’ should be accounted for in accordance with AASB 112 ‘Income Taxes’; and clarification of the financial reporting requirements in AASB 134 ‘Interim Financial Reporting’ and the disclosure requirements of segment assets and liabilities. The Company has considered the impact of AASB2012-5 in the preparation of the financial statements and that there has been no change to the disclosure in these financial statements resulting from AASB 2012-5.

(c) BASIS OF PREPARATION

These general purpose financial statements have been prepared in accordance with Australian Accounting Standards – Reduced Disclosure Requirements and Interpretations issued by the Australian Accounting Standards Board (‘AASB’) and the Corporations Act 2001, as appropriate for not-for-profit oriented entities.

The financial report except for the cash flow information has been prepared on an accruals basis and is based on historical costs, modified where applicable, by the measurement at fair value.
Notes to the Financial Statements 30 June 2014

1 Summary of significant accounting policies, cont.

of selected non current assets, financial assets and financial liabilities. The amounts presented in the financial statements have been rounded to the nearest dollar.

Critical accounting estimates

The preparation of the financial statements requires the use of certain critical accounting estimates. It also requires management to exercise its judgement in the process of applying the company’s accounting policies. The areas involving a higher degree of judgement or complexity, or areas where assumptions and estimates are significant to the financial statements are disclosed in note 2.

(d) COMPARATIVES

Comparative figures have been adjusted to conform to changes in presentation in these financial statements where required.

(e) REVENUE RECOGNITION

Revenue is recognised when it is probable that the economic benefit will flow to the company and the revenue can be reliably measured. Revenue is measured at the fair value of the consideration received or receivable.

Interest revenue is recognised as interest accrues using the specific interest rate applicable.

Members’ levies are recognised on advice of entitlement from the Department of Agriculture and from State Growers estimates of their levies payable.

Government contributions for matched payments are recognised at fair value where there is reasonable assurance that the contribution will be received and all conditions will be met.

All revenue is stated net of the amount of goods and services tax (GST).

(f) CURRENT AND NON-CURRENT CLASSIFICATION

Assets and liabilities are presented in the statement of financial position based on current and non-current classification.

An asset is current when: it is expected to be realised or intended to be sold or consumed in normal operating cycle; it is held primarily for the purpose of trading; it is expected to be realised within twelve months after the reporting period; or the asset is cash or cash equivalent unless restricted from being exchanged or used to settle a liability for at least twelve months after the reporting period. All other assets are classified as non-current.

A liability is current when: it is expected to be settled in normal operating cycle; it is held primarily for the purpose of trading; it is due to be settled within twelve months after the reporting period; or there is no unconditional right to defer the settlement of the liability for at least twelve months after the reporting period. All other liabilities are classified as non-current.

(g) CASH AND CASH EQUIVALENTS

Cash and cash equivalents include cash on hand, deposits held at call with banks and other short term highly liquid investments with original maturities of three months or less.

(h) HELD-TO-MATURITY INVESTMENTS

Term deposit holdings are classified as held-to-maturity investments as the company has the positive intent and ability to hold those securities to maturity – generally being 3-12 months from commencement. Held-to-maturity investments are recognised in the Statement of Financial Position upon purchase of the investment. Measurement is based on contractually agreed amounts with financial institutions wherein the investments are held. Held-to-maturity investments are recognised as Cash and Cash Equivalents where the maturity from balance date occurs in 3 months or less, otherwise they are recognised as short-term Financial Assets where the maturity from balance date is greater than 3 months, but at 12 months or less. Interests earned on held-to-maturity investments are recognised as revenue upon receipt and as accrued.
Notes to the Financial Statements 30 June 2014

1 Summary of significant accounting policies, cont.

(i) FURNITURE AND EQUIPMENT

Each class of furniture and equipment is carried at cost, less, where applicable, accumulated depreciation and impairment losses.

Purchases of furniture and equipment are recognised initially at cost, except for purchases costing less than $1,000, which are expensed in the year of acquisition (other than where they form part of a group of similar items which are significant in total).

Depreciation

The depreciable amount of all fixed assets is depreciated on a straight line basis over their useful lives to the Company commencing from the time the asset is held ready for use.

Leasehold improvements are depreciated over the shorter of either the unexpired period of the lease or the estimated useful lives of the improvements.

The depreciation rates used for each class of depreciable assets are:

› Office furniture and equipment 13% - 27%
› Leasehold improvements 20%

(j) IMPAIRMENT OF NON-FINANCIAL ASSETS

Non-financial assets are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. An impairment loss is recognised for the amount by which the asset’s carrying amount exceeds its recoverable amount.

Recoverable amount is the higher of an asset’s fair value less costs of disposal and value-in-use. The value-in-use is the present value of the estimated future cash flows relating to the asset using a pre-tax discount rate specific to the asset or cash-generating unit to which the asset belongs. Assets that do not have independent cash flows are grouped together to form a cash-generating unit.

Gains and losses on disposals are determined by comparing proceeds with the carrying amount. These gains and losses are included in the statement of comprehensive income in the period in which they arise. When revalued assets are sold, amounts included in the revaluation reserve relating to that asset are transferred to retained earnings.

(k) TRADE AND OTHER RECEIVABLES

Other receivables are recognised at amortised cost, less any provision for impairment.

(l) FAIR VALUE MEASUREMENT

When an asset or liability, financial or non-financial, is measured at fair value for recognition or disclosure purposes, the fair value is based on the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date; and assumes that the transaction will take place either: in the principle market; or in the absence of a principal market, in the most advantageous market.

Fair value is measured using the assumptions that market participants would use when pricing the asset or liability, assuming they act in their economic best interest. For non-financial assets, the fair value measurement is based on its highest and best use. Valuation techniques that are appropriate in the circumstances and for which sufficient data are available to measure fair value, are used, maximising the use of relevant observable inputs and minimising the use of unobservable inputs.

(m) ACCOUNTS PAYABLE AND OTHER PAYABLES

Accounts payable and other payables represent the liability outstanding at the end of the reporting period for goods and services received by the Company during the reporting period which remain unpaid. The balance is recognised as a current liability with the amounts normally paid within 30 days or recognition of the liability.

(n) EMPLOYEE PROVISIONS

Provision is made for the Company’s liability for employee benefits arising from services rendered by employees to the end of the reporting period.

Short-term employee benefits

Liabilities for wages and salaries, including non-
monetary benefits, annual leave and long service leave expected to be settled within 12 months of the reporting date are recognised in current liabilities in respect of employees’ services up to the reporting date and are measured at the amounts expected to be paid when the liabilities are settled.

Other long-term employee benefits
The liability for annual leave and long service leave not expected to be settled within 12 months of the reporting date are recognised in non-current liabilities, provided there is an unconditional right to defer settlement of the liability. The liability is measured as the present value of expected future payments to be made in respect of services provided by employees up to the reporting date using the projected unit credit method. Consideration is given to expected future wage and salary levels, experience of employee departures and periods of service. Expected future payments are discounted using market yields at the reporting date on national government bonds with terms to maturity and currency that match, as closely as possible, the estimated future cash outflows.

Contributions are made by the entity to an employee superannuation fund and are charged as expenses when incurred.

Superannuation
Employees of the Company are members of the AustralianSuper, Equipsuper, BT Financial Group, VicSuper, Care Super and Jim Houghton Superannuation Fund. Contributions are made to the Company employee superannuation funds and are charged as expenses when incurred.

(o) PROVISIONS
Provisions are recognised when the Company has a legal or constructive obligation as a result of a past event and it is probable that an outflow of economic benefits will be required to settle the obligation and a reliable estimate of the amount of the obligation can be made. If the effect is material, provisions are determined by discounting the expected future cash flows using a current pre tax rate that reflects, where appropriate, the risks specific to the liability.

(p) GOODS AND SERVICES TAX (GST)
Revenues, expenses and assets are recognised net of the amount of GST, except where the amount of GST incurred is not recoverable from the Australian Taxation Office (ATO).

Receivables and payables are stated inclusive of the amount of GST receivable or payable. The net amount of GST recoverable from, or payable to, the ATO is included with other receivables or payables in the statement of financial position.

Cash flows are presented on a gross basis. The GST components of cash flows arising from investing or financing activities, which are recoverable from or payable to the ATO, are presented as operating cash flows included in receipts from customers or payments to suppliers.

Commitments and contingencies are disclosed net of the amount of GST recoverable from, or payable to, the tax authority.

(q) LEASE
Leases are classified as finance or operating leases. A lease that transfers substantially all of the benefits and risks incidental to the ownership of property is classified as a finance lease. All other leases are accounted for as operating leases wherein rental payments are expensed as incurred. The Company does not have any finance leases.

(r) INCOME TAXES
No provision for income tax has been raised as the Company is exempt from income tax under Division 50 of the Income Tax Assessment Act 1997.

(s) ROUNDING OF AMOUNTS
The Company has applied the relief available to it under ASIC Class Order 98/0100 and accordingly, amounts in the financial report and directors’ report have been rounded off to the nearest $1.

(t) ECONOMIC DEPENDENCE
Forest and Wood Products Australia Limited (FWPA) is dependent on the Department of Agriculture for the majority of its revenue used to operate the business. At the date of this report, the Board of Directors has no reason to believe the Department will not continue to support FWPA Limited.
2 Critical accounting judgements, estimates and assumptions

The preparation of the financial statements requires management to make judgements, estimates and assumptions that affect the reported amounts in the financial statements. Management continually evaluates its judgements and estimates in relation to assets, liabilities, contingent liabilities, revenue and expenses. Management bases its judgements, estimates and assumptions on historical experience and on other various factors, including expectations of future events, management believes to be reasonable under the circumstances. The resulting accounting judgements and estimates will seldom equal the related actual results. The judgements, estimates and assumptions that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities (refer to the respective notes) within the next financial year are discussed below.

Estimation of useful lives of assets

The company determines the estimated useful lives and related depreciation charges for its property, plant and equipment. The useful lives could change significantly as a result of technical innovations or some other event. The depreciation charge will increase where the useful lives are less than previously estimated lives, or technically obsolete or non-strategic assets that have been abandoned or sold will be written off or written down.

Impairment of non-financial assets

The company assesses impairment of non-financial assets at each reporting date by evaluating conditions specific to the company and to the particular asset that may lead to impairment. If an impairment trigger exists, the recoverable amount of the asset is determined. This involves fair value less costs of disposal or value-in-use calculations, which incorporate a number of key estimates and assumptions.

Employee benefits provision

As discussed in note 1, the liability for employee benefits expected to be settled more than 12 months from the reporting date are recognised and measured at the present value of the estimated future cash flows to be made in respect of all employees at the reporting date. In determining the present value of the liability, estimates of attrition rates and pay increases through promotion and inflation have been taken into account.

19 Assets held in trust

Donations and bequests for specified research purposes are received from the public under formal trust arrangements. Monies received are placed in a special bank account and expended on the specified research projects in accordance with the terms of the trusts. The company took over control of the trust monies from Forest & Wood Products Research & Development Corporation on 3 September 2007. These monies are not available for other purposes of the company and are not recognised in the financial statements.

20 Events after the reporting period

No matter or circumstance has arisen since 30 June 2014 that has significantly affected, or may significantly affect the company’s operations, the results of those operations, or the company’s state of affairs in future financial years.

21 Company details

The registered office of the Company is:
Forest and Wood Products Australia Limited, Level 4, 10-16 Queen Street, Melbourne Victoria 3000
In accordance with a resolution of the directors of Forest and Wood Products Australia Limited, the directors declare that:

1. The financial statements and notes, as set out on pages 81 to 98, are in accordance with the Corporations Act 2001 and:
   (a) Comply with Accounting Standards; and
   (b) Give a true and fair view of the financial position of the Company as at 30 June 2014 and of its performance for the year ended on that date.

2. In the Directors’ opinion there are reasonable grounds to believe that the Company will be able to pay its debts as and when they become due and payable.

This declaration is made in accordance with a resolution of the Board of Directors.

Independent Auditor’s Report to the Members of Forest and Wood Products Australia Limited

Report on the financial report

We have audited the accompanying financial report of Forest and Wood Products Australia Limited (the company), which comprises the statement of financial position as at 30 June 2014, the statement of profit or loss, statement of comprehensive income, statement of changes in equity and statement of cash flows for the year then ended, notes comprising a summary of significant accounting policies and other explanatory information, and the directors’ declaration.

Directors’ responsibility for the financial report

The directors of the company are responsible for the preparation of the financial report that gives a true and fair view in accordance with Australian Accounting Standards – Reduced Disclosure Requirements and the Corporations Act 2001 and for such internal control as the directors determine is necessary to enable the preparation of a financial report that is free from material misstatement, whether due to fraud or error.

Auditor’s responsibility

Our responsibility is to express an opinion on the financial report based on our audit. We conducted our audit in accordance with Australian Auditing Standards. These standards require that we comply with relevant ethical requirements relating to audit engagements and plan and perform the audit to obtain reasonable assurance about whether the financial report is free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial report. The procedures selected depend on the auditor’s judgment, including the assessment of the risks of material misstatement of the financial report, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the company’s preparation and fair presentation of the financial report in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity’s internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by the directors, as well as evaluating the overall presentation of the financial report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Crowe Horwath Melbourne is a member of Crowe Horwath International, a Swiss verein. Each member of Crowe Horwath is a separate and independent legal entity. Liability limited by a scheme approved under Professional Standards Legislation other than for the acts or omissions of financial services licensees.
Independence
In conducting our audit, we have complied with the independence requirements of the Corporations Act 2001.

Auditor’s opinion
In our opinion the financial report of Forest and Wood Products Australia Limited is in accordance with the Corporations Act 2001, including

a) giving a true and fair view of the company’s financial position as at 30 June 2014 and of its performance for the year ended on that date; and

b) complying with Australian Accounting Standards – Reduced Disclosure Requirements (including Australian Accounting Interpretations) and the Corporations Regulations 2001.
